Internet Printing Project
Conference Call Minutes
November 13, 1996

The meeting was opened by Carl Manros at 4:05PM EST.

Participants were:

Don Wright - Lexmark
Roger Debry, IBM
Steve Gebert - IBM
Ray Lutz - Cognisys
Pete Zehler - Xerox
Mabry Dozier - QMS
Bob Herriot - Sun
Lee Ferrel - Canon
Hiro Sato - Canon
Pat Nogay - IBM
Jim Walker - Dazel
Carl Manros - Xerox
Tom Hastings - Xerox
Jay Martin - Underscore
Bill Wagner - DPI
Stan McConnell - Xerox
Scott Isaacson - Novell
Bob Setterbo - Adobe
Randy Turner - Sharp
Rob Whittle - Novell

Minor corrections to the minutes from the PWG session were identified and will be corrected on the ftp server.

The acronym IPP will standard for both Internet Printing Protocol (in the IETF context) and Internet Printing Project (in the PWG context).

Charter

- Need to create a "slim and mean" document as a charter plus an additional requirements document
- We will keep the existing document as the requirements document and it could be an internet draft. We will extract the higher level items and create a new shorter charter document.
- Don Wright will create a requirements document
- Carl will create the new charter. The charter will not contain the Version 2 contents and plans.
- Management information will be contained in an appendix that doesn't initially get submitted to the IETF.

Randy told the group that the new string representation of LDAP filters is located in Draft-ietf-asid-string-filter-v2-00.txt file on the IETF's ftp server.

Presentation of the new LDAP paper posted by Bob Herriot

Highlights:

- single printer object (not concept of logical versus physical printer)
- Bob Herriot, Roger Debry, Tom Hastings and Scot Isaacson will be updating the IPP document to simplify the discussion of printers, output devices, etc. so that the more complex configurations are in an appendix
- Job Object - multiple documents in job, each document will contain an attribute of the content type
- Resubmit and Modify jobs removed
- Review of Attributes
    - Notification of print job completion, etc. will be only by e-mail
    - Discussion on "print-after" versus "print-off-peak" – keep both

All the attributes included are "optional". If a job is submitted without the attributes, it is assumed that the job has been preformatted for that particular printer.

A later revision of the document will become an internet draft for the purpose of kicking-off the BOF at the IETF meeting.

BOF Agenda

The BOF will be at 1PM on December 12th at the IETF meeting in San Jose

The BOF title is currently LDPA, Carl will try to get it changed to indicate IPP.

- Presentations:
    - Requirements - Don Wright
        - old LPD
        - new browser paradigm
    - IPP Proposal - Scott Isaacson

Next conference call is 11/20/96 at 4PM EST. Details to follow on the e-mail reflector.

Brief discussion by Ray Lutz on overlap between IETF-Fax and this group.

The meeting ended at 6:05 PM EST.
