7 Internet Printing Protocol/1.0 & 1.1: Exception Attributes for Documents and Pages
8 <pwg-ipp-exceptions-model-31.doc, .pdf>

9 Status of this Memo

10 This document is a PWG-Draft of an IEEE-ISTO PWG Proposed Standard and is in full conformance with
11 all provisions of the PWG Process (see <http://www.pwg.org/chair/pwg-process-990825.pdf>). PWG-Drafts
12 are working documents of the IEEE-ISTO PWG and its working groups.

13 The list of current PWG-Drafts can be accessed at <http://www.pwg.org/pub/pwg/>

14 Abstract

15 This document specifies an extension to the Internet Printing Protocol/1.0 (IPP) [RFC2565, RFC2566] and
16 IPP/1.1 [ipp-mod, ipp-pro]. This extension relaxes the restriction that each attribute value is the same for all
17 pages and all documents within a job. For example, with this extension, page 1 of a job could have a
18 different media from the other pages in the job or document 2 of a job could be stapled while the other
19 documents of the job are not.

20
21 This extension supports document exceptions and page exceptions by adding two new Job Template
22 attributes: “document-exceptions” and “page-exceptions” -- both have a syntax type of “1setOf collection”.
23 Each ‘collection’ value for “document-exceptions” contains an attribute that identifies the exception
24 documents, namely “input-documents” or “output-documents”. The ‘collection’ value also contains one or
25 more attributes that are exceptions for the identified documents, e.g. “document-format”, “finishings”, and
26 “media”. Each ‘collection’ value for “page-exceptions” contains two attributes that identify the exception
27 pages, namely “input-documents” or “output-documents” plus “pages”. The ‘collection’ value also
28 contains one or more attributes that are exceptions for the identified pages, e.g. “sides” and “media”.
29

30 This extension also supports subset finishing by adding a new Job Template attribute “pages-per-subset”,
31 which specifies the number of pages per subset. The extension allows finishing and other document
32 attributes to be applied to such subsets of pages.

33
34 The full set of IPP documents includes:

- 35 - Design Goals for an Internet Printing Protocol [RFC2567]
- 36 - Rationale for the Structure and Model and Protocol for the Internet Printing Protocol [RFC2568]
- 37 - Internet Printing Protocol/1.1: Model and Semantics (this document)
- 38 - Internet Printing Protocol/1.1: Encoding and Transport [IPP-PRO]

- 39 - Internet Printing Protocol/1.1: Implementer's Guide [IPP-IIG]
- 40 - Mapping between LPD and IPP Protocols [RFC2569]

41 The "Design Goals for an Internet Printing Protocol" document takes a broad look at distributed printing
42 functionality, and it enumerates real-life scenarios that help to clarify the features that need to be included
43 in a printing protocol for the Internet. It identifies requirements for three types of users: end users,
44 operators, and administrators. It calls out a subset of end user requirements that are satisfied in IPP/1.0. A
45 few OPTIONAL operator operations have been added to IPP/1.1.

46 The "Rationale for the Structure and Model and Protocol for the Internet Printing Protocol" document
47 describes IPP from a high level view, defines a roadmap for the various documents that form the suite of
48 IPP specification documents, and gives background and rationale for the IETF working group's major
49 decisions.

50 The "Internet Printing Protocol/1.1: Encoding and Transport" document is a formal mapping of the abstract
51 operations and attributes defined in the model document onto HTTP/1.1 [RFC2616]. It defines the
52 encoding rules for a new Internet MIME media type called "application/ipp". This document also defines
53 the rules for transporting over HTTP a message body whose Content-Type is "application/ipp". This
54 document defines a new scheme named 'ipp' for identifying IPP printers and jobs.

55 The "Internet Printing Protocol/1.1: Implementer's Guide" document gives insight and advice to
56 implementers of IPP clients and IPP objects. It is intended to help them understand IPP/1.1 and some of the
57 considerations that may assist them in the design of their client and/or IPP object implementations. For
58 example, a typical order of processing requests is given, including error checking. Motivation for some of
59 the specification decisions is also included.

60 The "Mapping between LPD and IPP Protocols" document gives some advice to implementers of gateways
61 between IPP and LPD (Line Printer Daemon) implementations.

147

148 1. Introduction

149 The Internet Printing Protocol (IPP) is an application level protocol for distributed printing using Internet
150 tools and technologies. IPP version 1.1 (IPP/1.1) requires that each attribute value be the same for all
151 documents and all pages in a job. This document defines OPTIONAL extensions to the IPP/1.1 model
152 which relax this restriction and allow documents and pages to have attributes that are exceptions. For
153 example, with this extension, page 1 of a job could have a different media or different value of “sides” from
154 the other pages in the job, or document 2 of a job could be stapled while the other documents of the job are
155 not. This document is a proposal for an extension to IPP/1.0 and IPP/1.1.

156
157 This extension supports document exceptions and page exceptions by adding two new Job Template
158 attributes: “document-exceptions” and “page-exceptions” -- both have a syntax type of “1setOf collection”.
159 Each ‘collection’ value for “document-exceptions” contains an attribute that identifies the exception
160 documents, namely “input-documents” or “output-documents”. The ‘collection’ value also contains one or
161 more attributes that are exceptions for the identified documents, e.g. “document-format”, “finishings”, and
162 “media”. Each ‘collection’ value for “page-exceptions” contains two attributes that identify the exception
163 pages, namely “input-documents” or “output-documents” plus “pages”. The ‘collection’ value also
164 contains one or more attributes that are exceptions for the identified pages, e.g. “sides” and “media”.

165
166 This extension also supports subset finishing with a new Job Template attribute “pages-per-subset”, which
167 specifies the number of pages per subset. The extension allows finishing and other document attributes to
168 be applied to such subsets of pages.

169 2. Terminology

170 This section defines the following additional terms that are used throughout this document:

171 2.1 REQUIRED

172 If an implementation supports the extensions described in this document, it **MUST** support a
173 **REQUIRED** feature.

174 2.2 OPTIONAL

175 If an implementation supports the extensions described in this document, it **MAY** support an
176 **OPTIONAL** feature.

177 2.3 Exception-Extension

178 The Exception-Extension is the extension proposed in this document that adds attribute exceptions
179 for documents and pages. This extension supports Document-Exceptions, Page-Exceptions and
180 Subset-Finishing, which are all defined later in this section.

181 2.4 Sheet

182 A Sheet is the unit of media that a printer puts marks on. It is the most basic unit of output from a
183 printer. A printer may mark on one side or on both sides of a sheet.

184 2.5 Output-Page

185 An Output-Page is the set of all markings that the author intended to be placed on one side of a
186 Sheet, including, but not limited to, text, drawings, images, footers and headers.

187 2.6 Impression:

188 An impression is the set of all markings that the Job submitter intended to be placed on one side of a
189 Sheet. Each impression contains one or more Output-Pages. Generally a Job submitter prints each
190 Output-Page as the author intended, namely one Output-Page per Impression. Sometimes, a Job
191 submitter prints several Output-Pages per Impression, perhaps to save paper or money. The IPP
192 attribute "number-up" specifies the number of Output-Pages per impression. When "number-up" is
193 greater than 1, an impression contains multiple Output-Pages.

194 2.7 Input-Page

195 An Input-Page is a sequence of bytes that describe how to mark a single Output-Page. IPP 1.1 [ipp-
196 mod] uses the term "print-stream-pages" to refer to both Input-Pages and Output-Pages. There is a
197 one to one relationship between Input-Pages and Output-Pages and they are in the same order. Both
198 Input-Pages and Output-Pages are numbered sequentially (see section 4.1) starting from 1 at the
199 beginning of each Input-Document or Output-Document, respectively. When the first Input-Page of
200 an Input-Document coincides with the first Output-Page of an Output-Document, the numbering of
201 Input-Pages and Output-Pages coincides; otherwise it doesn't.

202 2.8 Input-Document

203 An Input-Document is the entire sequence of bytes transmitted as the Document Content in the
204 Print-Job and Send-Document operations or referenced by the "document-uri" operation attribute in
205 the Print-URI and Send-URI operations. This sequence of bytes consists of one or more Input-
206 Pages.

207 2.9 Output-Document

208 An Output-Document is a set of one or more Sheets which either are permanently bound into a
209 single unit, e.g. with a staple, or are intended to be treated by an end-user as a single unit, e.g. for a
210 loose leaf binder. If an Output-Document is bound, it is uniformly bound; if it is not bound, no
211 subset of sheets within it are bound. The Output-Pages that comprise an Output-Document may
212 come from

- 213
- 214 a) all the Input-Pages of an Input-Document or
 - 215 b) a proper subset of the Input-Pages of the Input-Document or

216 c) all the Input-Pages of several Input-Documents.

217

218 An Output-Document is *not* a set of sheets that are bound temporarily for shipping, e.g. with
 219 banding.

220 2.10 Relationship between Input-Document and Output-Documents

221 Each relationship is named and defined below. The cases are derived from an analysis of possible
 222 tree structures (see section 4.2). A client selects the desired case with the number of submitted
 223 Input-Documents and the specific values of three attributes: the existing Job Template “multiple-
 224 document-handling” and two new attributes “pages-per-subset” and “documents-per-subset”. The
 225 latter two attributes describe how the stream of Input-Pages or Input-Documents and are partitioned
 226 into Output-Documents, respectively.

227

228

229 The table below summarizes the relationship of Input-Documents to Output-Documents in the five
 230 cases:

231

| Case | Number of | |
|---------------------------|-----------------|------------------|
| | Input-Documents | Output-Documents |
| Degenerate | 1 | 1 |
| Separate-Documents | n | n |
| Single-Document | n | 1 |
| Page-Subset Documents | n | m (m >n) |
| Document-Subset Documents | n | m (m < n) |

232

233 When n = 1 for the “Separate-Documents” and “Single-Document” become the “Degenerate” case.

234

235 The table below summarizes the attribute values that control the cases.

236

- 237 - The “separate” value means that “multiple-document-handling” is 'separate-documents-
 238 collated-copies' or 'separate-documents-uncollated-copies'.
- 239 - The “single” value means that “multiple-document-handling” is 'single-document' or 'single-
 240 document-new-sheet'.
- 241 - The “ignored” value means that the attribute need not be present and is ignored if it is present,
- 242 - The “present” value means that the attribute must be present. A different case is implied if it is
 243 not present.
- 244 - The “not present” value means that the attribute must not be present. A different case is implied
 245 if it is present.

246

| Case | “multiple- document- handling” | “pages-per- subset” | “documents-per- subset” |
|--------------------|--------------------------------------|------------------------|----------------------------|
| Separate-Documents | separate | not present | not present |
| Single-Document | single | ignored | ignored |

| Case | “multiple-document-handling” | “pages-per-subset” | “documents-per-subset” |
|---------------------------|------------------------------|--------------------|------------------------|
| Page-Subset Documents | separate | present | not present |
| Document-Subset Documents | separate | not present | present |

247
248
249
250
251

The Degenerate row is omitted because it follows the rules for the “Separate-Documents” and “Single-Documents” rules when the number of Input-Documents is 1. There is an error if both “page-per-subset” and “document-per-subset” are present in the “separate” case.

252 2.10.1 Degenerate Case:

253
254
255
256
257
258
259
260
261
262
263
264

In the Degenerate Case, the Job consists of exactly one Output-Document and exactly one Input-Document. The single Input-Document produces the single Output-Document. This case represents the most common case of printing. For example, if a user is Printing a single MS Word file, the MS Word file is the Input-Document and the printed pages are the Output-Document. This case is the degenerate case of Separate-Documents and Single-Document. It occurs when the number of Input-Documents is 1 and either

- a) “multiple-document-handling” is 'separate-documents-collated-copies' or 'separate-documents-uncollated-copies' and neither “pages-per-subset” nor “documents-per-subset” are present or.
- b) “multiple-document-handling” is 'single-document' or 'single-document-new-sheet', and both “pages-per-subset” and “documents-per-subset” are ignored if present

265 2.10.2 Separate Documents Case

266
267
268
269
270
271
272
273

In the Separate Documents Case, the Job consists of one or more Output-Documents where each Input-Document produces one Output-Document. For example, if a user prints 10 Java files in one Job and wants 10 separately stapled Output-Documents, each of the 10 Java files is an Input-Document, and the printed Output-Pages from each of the 10 Java files is a separate Output-Document that is stapled separately. This case occurs when “multiple-document-handling” is 'separate-documents-collated-copies' or 'separate-documents-uncollated-copies' and the new attributes “pages-per-subset” and “documents-per-subset” are not present.

274 2.10.3 Single Document Case

275
276
277
278
279
280
281

In the Single Document Case, the job consists of a single Output-Document produced from one or more Input-Documents. For example, if a user prints 10 Java files in one Job and wants all Output-Pages of the 10 Java files to be produced as 1 stapled Output-Document, then each of the 10 Java files is an Input-Document, and all printed Output-Pages from all of the 10 Java files is a single Output-Document that is stapled. This case occurs when “multiple-document-handling” is 'single-document' or 'single-document-new-sheet'; the value of “pages-per-subset” and “documents-per-subset” are both ignored if present.

282 2.10.4 Page-Subset Document Case:

283 In the Page-Subset Case, the Job consists of one or more Output-Documents and one or
284 more Input-Documents. The new attribute “pages-per-subset” contains a sequence of
285 integers which specifies how to partition the stream of Input-Pages into subsets, each of
286 which produces an Output Document. For example, if a user prints 1 PostScript file with
287 1000 pages, where each 4 Output-Pages represents an insurance policy, then the PostScript
288 file is the Input-Document and each group of 4 Output-Pages is an Output-Document. The
289 resulting Output-Documents would be the same if the same 1000 Input-Pages were spread
290 across 2 or more PostScript files. This case occurs when “multiple-document-handling” is
291 'separate-documents-collated-copies' or 'separate-documents-uncollated-copies' and the new
292 attribute “pages-per-subset” contains 1 or more integer values. The new attribute
293 “documents-per-subset” is not present.

294 2.10.5 Document-Subset Document Case:

295 This case is defined here for completeness, but it is not supported by this extension.

296
297 In the Document-Subset Document Case, the Job consists of one or more Output-Documents
298 and one or more Input-Documents. The new attribute “documents-per-subset” contains a
299 sequence of integers which specifies how to partition Job’s Input-Documents into subsets,
300 each of which produces an Output Document. For example, if a user prints 25 Java files in
301 one Job and wants 2 separately stapled Output-Documents, one with 15 Java files and one
302 with 10 Java files, then each of the Java files is an Input-Document, and the printed Output-
303 Pages from the first 15 Java files and next 10 Java files are two separate Output-Documents
304 that are stapled separately. This case occurs when “multiple-document-handling” is
305 'separate-documents-collated-copies' or 'separate-documents-uncollated-copies' and
306 “documents-per-subset” contains 1 or more integer values. The new attribute “pages-per-
307 subset” is not present.
308

309 2.11 Document-Exceptions

310 In IPP/1.1 each attribute value is the same for the entire Job. When an attribute is a “Document-
311 Exceptions” attributes, it is different for identified Input-Documents or Output-Documents.

312 2.12 Page-Exceptions

313 In IPP/1.1 each attribute value is the same for the entire Job. When an attribute is a “Page-
314 Exceptions” attributes, it is different for identified Input-Pages or Output-Pages.

315 2.13 Subset-Finishing

316 Subset-Finishing is the ability to subdivide the stream of Input-Pages from one or more Input-
317 Documents into multiple Output-Documents and to apply the same or different finishing to each
318 individual Output-Document.

319 2.14 Affects

320 Each attribute is said to ‘affect’ some part of a job. For example, “media” affects a sheet,
321 “finishings” affects an Output-Document, “page-ranges” affects an Input-Document and “job-
322 priority” affects a job. This nuance must be explicit in the Exceptions-Extension because the parts
323 of a job that an attribute affects limit the parts of a job that an attribute can be associated with (see
324 the next section for a definition of “associates”). For example, “job-priority” affects a job; so it can
325 be associated with a Job, but not an Input-Document or Input-Page. Likewise, “finishings” affects
326 and Output-Document; so it can be associated with a Job or an Output-Document, but not with an
327 Output-Page.

328 2.15 Associates

329 The word “associates” combines the meaning of the two terms in subsections of this section, namely
330 “directly associates” and “effectively associates”. When an attribute is either directly associated or
331 effectively associated with some part of a job, it is said to be “associated” with that part of a job.

332 2.15.1 Directly Associates

333 When an attribute is said to be ‘directly associated’ with some part of a job, it affects that
334 part or some other part. The part that it affects depends on the attribute and what the attribute
335 is directly associated with. For example if “media” is directly associated with a job, it affects
336 all sheets in the job. If “media” is directly associated with an Output-Document, it affects all
337 sheets in that Output-Document. If “media” is directly associated with an Output-Page, it
338 affects the sheet containing that Output-Page.

339 2.15.2 Effectively Associates

340 When an attribute is said to be directly associated with some part of a job ‘A’ that is
341 semantically connected with another part ‘B’, the attribute is said to be “effectively
342 associated” with ‘B’. For example, in the Separate-Documents Case, when an attribute is
343 directly associated with an Input-Document, it is effectively associated with the
344 corresponding Output-Document.

345 2.16 Job-Submission Operations:

346 The Job-Submission Operations are the IPP operations that create jobs and send document content,
347 namely Print-Job, Print-URI, Create-Job, Send-Document and Send-URI.

348 3. Requirements

349 The following is a list of requirements for the Exceptions-Extension.

- 350
351 1. The Exception-Extension **MUST** contain a mechanism for specifying Job attributes that are
352 exceptions for particular Input-Documents or Output-Documents. A Printer and a client
353 **OPTIONALLY** support this mechanism.

- 354 2. There MUST be a mechanism for specifying Job attributes that are exceptions for particular Input-
355 Pages or Output-Pages. A Printer and a client OPTIONALLY support this mechanism.
- 356 3. The mechanism for exceptions MUST be supported by all Job-Submission operations and Validate-
357 Job.
- 358 4. The extension MUST support the four relationships of Input-Documents and Output-Documents:
359 Degenerate Case, Separate-Documents Case, Single-Document Case and Page-Subset Document
360 Case.
- 361 5. The extension MUST support Subset-Finishing.

362 4. Overview

363 In IPP 1.1 all attributes that a client includes with job creation operations affect the entire Job in a uniform
364 way. That is, there is no way for one Output-Document in a given Job to be stapled and another drilled.
365 Also, there is no way for the first sheet of each Output-Document to be on a different media or to have a
366 different value of “sides” from the other Sheets in the Output-Document. An IPP/1.1 client can specify
367 features, such as finishing, media and sides only at the job level.

368
369 The Exception Extension defined in this document allows some Output-Pages, some Output-Documents
370 and some Input-Documents to be affected by attribute values that are exceptions to those specified for the
371 Job as a whole. For example, the first Output-Page of an Output-Document has a different media from the
372 rest, or the second Output-Document is stapled and the rest are not, or the page-ranges of the first Input-
373 Document selects a few Input-Pages and the rest of the Input-Documents are printed in full.

374 4.1 Numbering of Components

375 The Exception Extension defines a system for numbering of components.

- 376
- 377 - Each Input-Document has a number. The single Input-Document that a client sends with Print-Job
378 or Print-URI and the first Input-Document that a client sends with Send-Document or Send-URI has
379 a number of 1. Each subsequent Input-Document that a clients sends has a number that is one
380 higher than the previous.
 - 381 - Each Input-Page in an Input-Document is numbered sequentially, starting at 1 for the first Input-
382 Page. If a Job has several Input-Documents, the first Input-Page of each Input-Document has the
383 number of 1, which is relative to that Input-Document.
 - 384 - Each Output-Document has a number. The first Output-Document has a number of ‘1’, and each
385 subsequent Output-Document has a number that is one higher than the previous Output-Document.
386 The Output-Documents are numbered as if the value of “copies” were 1, i.e. if an Input-Document
387 produces multiple copies, each copy of a particular Output-Document has the same number.
 - 388 - Each Output-Page in an Output-Document is numbered sequentially, starting at 1 for the first
389 Output-Page. If a Job has several Output-Documents, the first Output-Page of each has the number
390 of 1, which is relative to that Output-Document

391 4.2 Relationship of Numbered Components

392 The previous section described how to number Input-Documents, Output-Documents, Input-Pages and
393 Output-Pages. This section describes the relationship between the number on each of these four
394 components. The relationship differs for each of the five cases defined in section 2.10. The following
395 diagrams of tree structure show each of the five cases and the relationship of the numbers in those cases.
396

397 Degenerate Case:

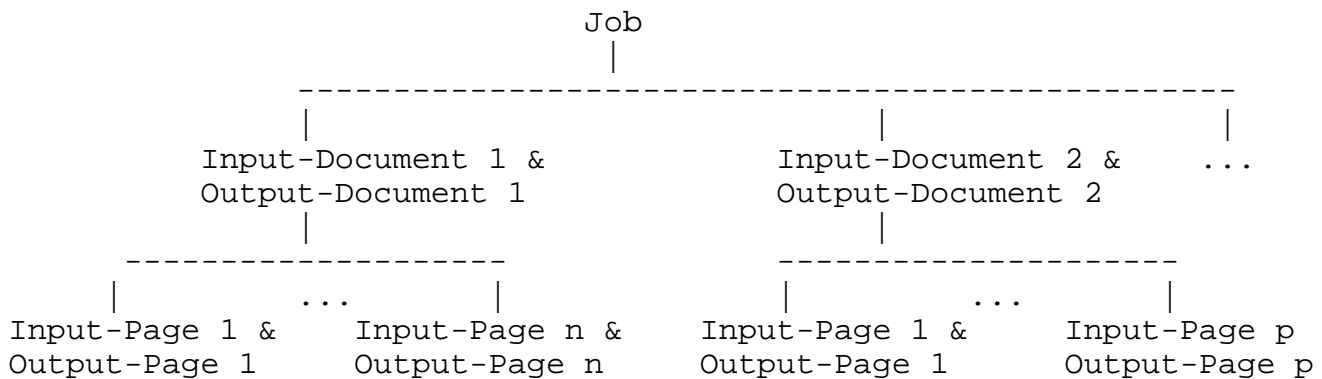

408
409 Conditions that define this case:

- 410 - Job contains exactly 1 Input-Document
- 411
- 412 - Either conditions for "Separate-Documents" or "Single-Documents" are met.

413 Observations about this case:

- 414
- 415 - Job coincides with Output-Document 1 and Input-Document 1
- 416 - Output-Page i coincides with Input-Page i

417 Separate-Documents Case:

430
431 Conditions that define this case:

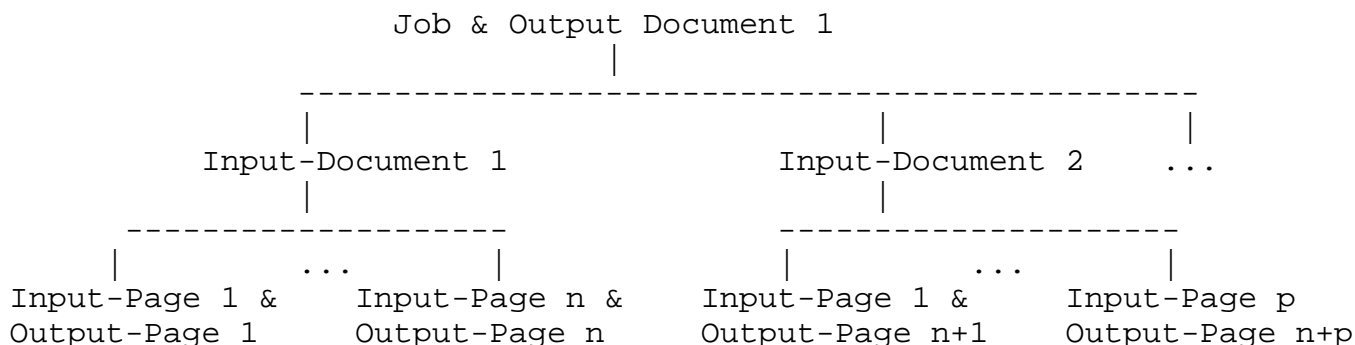

432

- 433 - Job contains more than one or more Input-Documents, though one Input-Document is technically
- 434 the Degenerate Case.
- 435 - “multiple-document-handling” is 'separate-documents-collated-copies' or 'separate-documents-
- 436 uncollated-copies'
- 437 - “pages-per-subset” is not present
- 438 - “documents-per-subset” is not present

439 Observations about this case:

- 440
- 441 - Output-Document i coincides with Input-Document i
- 442 - Output-Page i coincides with Input-Page i

443
444 Single-Document Case:

457 Conditions that define this case:

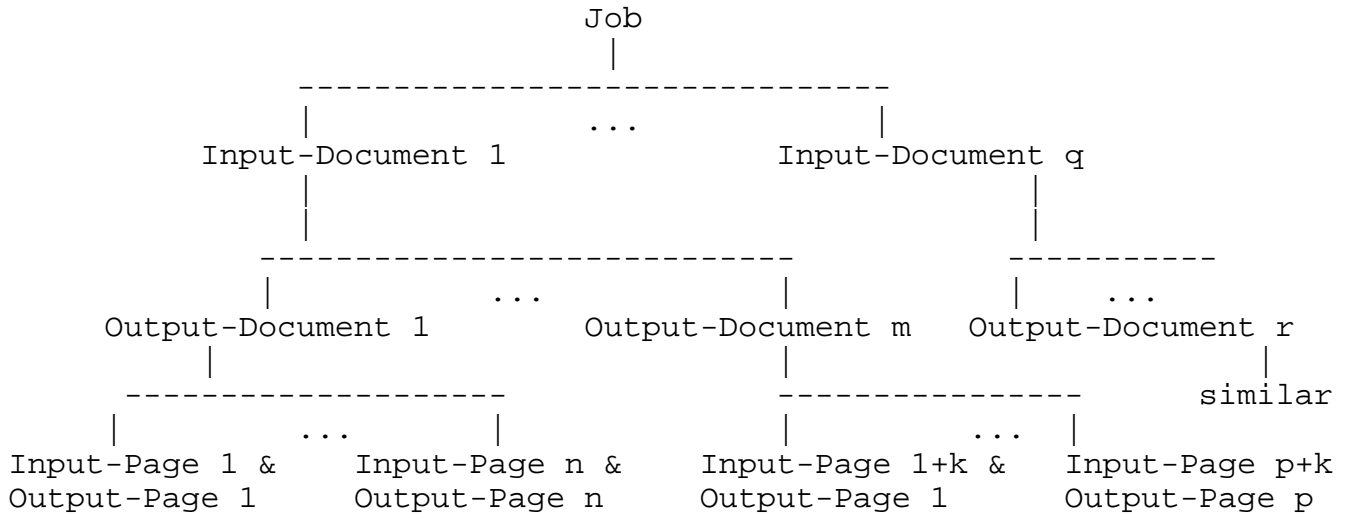

- 458
- 459 - Job contains more than one or more Input-Documents, though one Input-Document is technically
- 460 the Degenerate Case.
- 461 - “multiple-document-handling” is 'single-document' or 'single-document-new-sheet';

462 Observations about this case:

- 463
- 464 - Output-Document 1 coincides with the Job
- 465 - The numbering of Output-Pages is continuous through all Input-Documents, but the numbering of
- 466 Input-Pages starts at 1 in each Input-Document. That is, Input-Page i in Input-Document m
- 467 coincides with Output-Page i + k, where k is the number of Input-Pages in all previous Input-
- 468 Documents, i.e. Input-Documents 1 through m-1.

- 469 - “pages-per-subset” is ignored if present
- 470 - “documents-per-subset” is ignored if present

471
472 Page-Subset Document Case:

489 Conditions that define this case:

- 491 - Job contains one or more Input-Documents
- 493 - “multiple-document-handling” is 'separate-documents-collated-copies' or 'separate-documents-uncollated-copies'
- 494
- 495 - “pages-per-subset” is present.
- 496 - “documents-per-subset” is not present

497 Observations about this case:

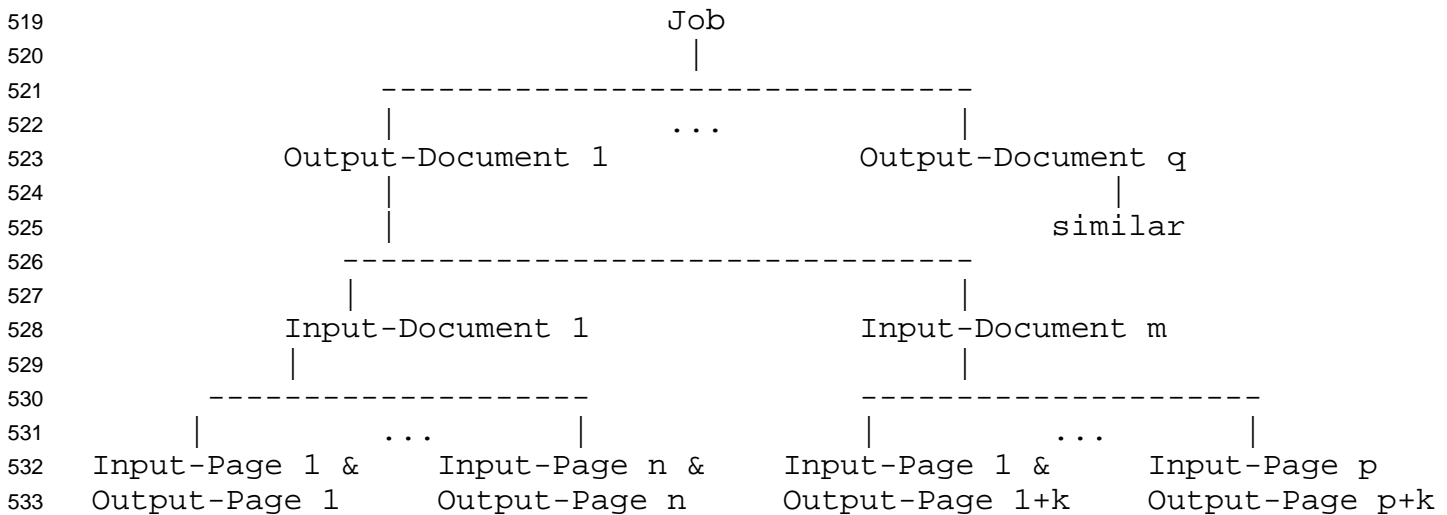

- 498
- 499 - The diagram shows that Output-Documents 1 through m are contained in Input-Document 1, and
- 500 Output-Documents m+1 through t are contained in Input-Document 2 and so on. However, this
- 501 diagram is not completely accurate. The Input-Pages from all Input-Documents are more accurately
- 502 viewed as a continuous stream of Input-Pages that are partitioned into Output-Documents as
- 503 specified by the attribute “pages-per-subset”. For example, an Output-Document could come from
- 504 the last 3 Input-Pages of an Input-Document and the first 4 Input-Pages of the next Input-Document.
- 505 - The Input-Pages in each Input-Document are numbered sequentially starting from 1 and the Output-
- 506 Pages in each Output-Document are numbered sequentially starting from 1. For the first Output-
- 507 Document, the numbers of the Input-Pages and Output-Pages coincide. For subsequent Output-
- 508 Documents, the numbers differ. For example, the first Output-Page of the second Output-Document

509 coincides with Input-Page w, where w is the number of Output-Pages in the first Output-Document.
 510 To be specific, Output-Page i in Output-Document m coincides with Input-Page i + k of the Job,
 511 where k is the number of Output-Pages in all previous Output-Documents of the job, e.g. Output-
 512 Documents 1 through m-1.

513 - “pages-per-subset” specifies the number of pages in each Output-Document.

514
 515 Document-Subset Document Case:

516
 517 NOTE: this case is here for completeness and is not supported by the Exceptions-Extension.

535 Conditions that define this case:

- 536 - Job contains one or more Input-Documents
- 537
- 538 - “multiple-document-handling” is 'separate-documents-collated-copies' or 'separate-documents-
 539 uncollated-copies'
- 540 - “pages-per-subset” is not present.
- 541 - “documents-per-subset” is present

542 Observations about this case:

- 543 - Input-Documents 1-m are contained in Output-Document 1, and Input-Documents m+1 through t
 544 are contained in Output-Document 2 and so on.
- 545
- 546 - Input-Page i in Input-Document m coincides with Output-Page i + k of Output-Document j, where k
 547 is the number of Input-Pages in all previous Input-Documents of Output-Document j, e.g. Input-
 548 Documents 1 through m-1.

- 549 - “documents-per-subset” has the number of Input-Documents in each Output-Document.

550 4.3 Association of Attributes

551 The Exception Extension allows attribute associations with Input-Pages, Output-Pages, Input-Documents
552 and Output-Documents, and it continues to allow associations with Jobs. The Exception Extension specifies
553 rules for associations, and it categorizes attributes according to what they affect. The categories of attributes
554 and the members in the Exceptions-Extension are:

- 555
- 556 - Input Documents: “page-ranges”, “document-format”, “document-name”, “compression” and
557 “document-natural-language”.
 - 558 - Output-Documents: “finishings”
 - 559 - Sheets: “media” and “sides”

560 The table below shows what each of the three categories of attributes can be associated with:

561

| | Category of attribute | | |
|------------------|-----------------------|-----------------|--------|
| Associates with: | Input-Document | Output-Document | Sheets |
| Input-Document | yes | yes | yes |
| Output-Document | no | yes | yes |
| Input-Page | no | no | yes |
| Output-Page | no | no | yes |

562

563 The meaning of these associations and their limitation is specified in section 15.

564

565 The Exception-Extension mechanism seems to be general enough to add new Document-Exceptions and
566 Page-Exceptions attributes without changing or extending the general mechanism. That is, an existing or
567 new Job attribute becomes a Document-Exceptions or Page-Exceptions attribute when a description of that
568 attributes says so, but no changes need be made to the ways exceptions work. If the new attribute belongs
569 to one of the three above categories, it follows the rules of that category. If it belongs to a new categories,
570 the rules of association must be defined.

571 4.4 Subset Finishing

572 In IPP/1.1 a Printer applies the “finishings” attribute to all Output-Documents in a given job. This proposal
573 supports “Subset Finishing” which we define as the ability to partition the Input-Pages of an Input-
574 Document into one or more Output-Documents and to apply different types of finishing to each of the
575 individual Output-Documents contained within a single job.

576

577 This model supports subset finishing with the new attribute “pages-per-subset” which specifies the number
578 of Input-Pages per Output-Document. This model treats Subset-Finishing as a Job level sub-setting of the
579 Input-Documents into Output-Documents and as a Document Exception attribute rather than a Page
580 Exception attribute for two reasons.

581

582 - Page-Exceptions, as their name suggests, are exceptions for a few Input-Pages or Output-Pages that
 583 differ from the rest of the Input-Pages or Output-Pages in the Job. With Subset-Finishing, all Input-
 584 Pages belong to some subset. So, sub-setting is not an exception; it encompasses the entire Job.
 585 Only the finishing part of Subset-Finishing can have exceptions and those exceptions apply to a
 586 subset, much like they apply to Output-Documents. Because subsets behave like Output-
 587 Documents, it is easiest to describe the sub-setting operation as creating Output-Documents.

588 - If the attributes “media”, “sides” and “finishings” were all treated as Page-Exception attributes, then
 589 there would have to one rule for splitting and merging groups when “finishings” is associated with
 590 the group and another rule when it is not associated with the group. If a Page-Exception specifies
 591 “sides” is duplex for pages 1-10 and “media” is added to pages 5 and 6, there can be three Page-
 592 Exception groups, one for pages 1-4 with “sides”, one for pages 5 and 6 with “sides” and “media”
 593 and one for pages 7-10 with sides. If “media” is removed, the groups can be merged back to the
 594 original single group. If “finishings = staple” had been present in the original group of pages 1-10,
 595 such a split would change finishing from one staple in pages 1-10 to 3 staples, one in pages 1-6, one
 596 in page 5-6 and one in pages 7-10.

597

598 The remainder of this document describes the changes necessary to support the Exceptions Extension.

599 5. New Job Template Attributes

600 The Exception Extension adds three new Job Template attributes: “document-exceptions”, “page-
 601 exceptions” and “pages-per-subset”. The first two attributes support exception attributes, and the third
 602 supports subset finishing.

603

| Job Attribute | Printer: Default Value Attribute | Printer: Supported Values Attribute |
|--|----------------------------------|---|
| document-exceptions (1setOf collection) | none | document-exceptions-supported (1setOf type1 keyword) |
| page-exceptions (1setOf collection) | none | page-exceptions-supported (1setOf type1 keyword) |
| page-per-subset (1setOf integer) | none | pages-per-subset-supported (Boolean) |

620

621 5.1 document-exceptions (1setOf collection)

622 This OPTIONAL Job Template attribute contains attributes that are associated with Input-Documents and
623 Output-Documents and that are treated as document exceptions. Such attributes are called “Document-
624 Exceptions” attributes.

625

626 If this attribute is not present in a Job, there are no Document-Exceptions within the Job. If it is present, the
627 value consists of one or more ‘collection’ values, where each ‘collection’ value identifies one or more
628 Input-Documents or Output-Documents and contains one or more Job Template attributes which act as
629 exceptions to the corresponding Job Template attribute values for the specified Input-Documents or Output-
630 Documents.

631

632 The first attribute of each ‘collection’ value MUST be either “input-documents” or “output-documents” and
633 this attribute identifies Input-Documents or Output-Documents, respectively. The remaining attributes in
634 the ‘collection’ value are the one or more Job Template attributes that are exceptions for the specified
635 Input-Documents or Output-Documents. The allowed attributes are listed in section 5.1.7

636 There may be more than one way for a client to arrange Document-Exceptions attributes in ‘collection’
637 values. For example, if a job contains 10 Output-Documents to be printed 1-sided on letter paper with no
638 stapling and Output-Documents 1 and 2 are to be two sided with stapling and Document 2 is to be two sided with
639 no stapling, there are two possible ways to group the exceptions. The client could specify the two
640 exceptions for Output-Documents 1 and 2 in one ‘collection’ value and the single exception for Output-Documents
641 2 in a second ‘collection’ value, or it could specify “two-sided” for Output-Documents 1 and 2 in one
642 ‘collection’ value and “stapled” for Output-Documents 1 in another ‘collection’ value.

643 If the “input-documents” or “output-documents” identify Input-Documents or Output-Documents that don’t
644 exist, the Printer silently ignores them and associates the Document-Exceptions with those Input-
645 Documents or Output-Documents that do exist. A client MUST NOT allow two ‘collection’ values to be
646 associated with the same Input-Documents or Output-Documents and to contain the same Document-
647 Exceptions attribute with different values. If the client violates the preceding rule, the Printer can use either
648 value, and it MUST issue a warning. It does so by adding ‘job-warnings-detected’ to the “job-state-reasons”
649 and by increasing the value of the “job-warnings-count” Job Description attribute by 1. If the Printer
650 detects this conflict while it is processing a Job-Submission operation, it MUST return the ignored values in
651 the Unsupported attributes.

652 When a Client receives this attribute in a Get-Jobs or Get-Job-Attributes, the value MUST contain the same
653 ‘collection’ values received in Job-Submission operations, except for those ‘collection’ values the Printer
654 returned in the Unsupported Attributes.

655 Each ‘collection’ value of this attribute has either of the two forms as defined below. The ‘collection’
656 values NEED NOT all be of the same form.

657 For the first form, the client MUST supply “input-documents” as the first. The client OPTIONALLY
658 supplies the remaining attributes in any order.

| <u>Attribute name</u> | <u>syntax</u> | <u>In request</u> | <u>Printer Support</u> |
|-----------------------|---------------|-------------------|------------------------|
|-----------------------|---------------|-------------------|------------------------|

| <u>Attribute name</u> | <u>syntax</u> | <u>In request</u> | <u>Printer Support</u> |
|---------------------------|-------------------------------|-------------------|------------------------|
| input-documents | rangeOfInteger(MAX) | MUST | MUST |
| document-format | mimeMediaType | MAY | MUST |
| document-name | name (MAX) | MAY | MUST |
| compression | type3 keyword | MAY | MUST |
| document-natural-language | naturalLanguage | MAY | MAY |
| page-ranges | 1setOf rangeOfInteger (1:MAX) | MAY | MAY |
| finishings | 1setOf type2 enum | MAY | MAY |
| sides | type2 keyword | MAY | MAY |
| media | type3 keyword name(MAX) | MAY | MAY |

659 For the second form, the client MUST supply “output-documents” as the first attribute. The client
 660 OPTIONALLY supplies the remaining attributes in any order.

| <u>Attribute name</u> | <u>syntax</u> | <u>In request</u> | <u>Printer Support</u> |
|-----------------------|---------------------------|-------------------|------------------------|
| output-documents | rangeOfInteger(MAX) | MUST | MUST |
| finishings | 1setOf type2 enum | MAY | MAY |
| sides | type2 keyword | MAY | MAY |
| media | type3 keyword name(MAX) | MAY | MAY |

661 The following sections describe each attribute in the above table.

662 5.1.1 input-documents (rangeOfInteger (1:MAX))

663 This attribute identifies one or more Input-Documents by specifying a range of numbers (see section
 664 4.1 for the rules on associating a number with each Input-Documents). The Document-Exceptions
 665 apply to the identified Input-Documents.

666
 667 A Printer MUST support this attribute. A client MUST supply this attribute in each ‘collection’
 668 value and it MUST be the first attribute of each ‘collection’ value. If this attribute is present, then
 669 the client MUST NOT supply “output-documents”. If this attribute is not the first attribute in a
 670 ‘collection’ value, a Printer, depending on implementation, MUST either

- 671 a) ignore the “input-documents” attribute or
- 672 b) reject all attributes in the ‘collection’ value and treat the ‘collection’ values, but not other
- 673 sibling ‘collection’ values, as unsupported.
- 674
- 675

676 When a client supplies this attribute in a “document-exceptions” attribute of a Send-Documents or
 677 Send-URI request, this attribute MUST NOT identify Input-Documents which were sent in an
 678 earlier operation. If a Printer receives such a value in a ‘collection’ value, it MUST treat all
 679 attribute values in such a ‘collection’ value, but not other sibling ‘collection’ values, as unsupported
 680 values and return the entire collection value in the Unsupported Attributes group.

681
 682 See section 5 for details of usage of this attribute.

683

684 5.1.2 output-documents (rangeOfInteger (1:MAX))

685 This attribute identifies one or more Output-Documents by specifying a range of numbers (see
686 section 4.1 for the rules on associating a number with each Output-Document). The Document-
687 Exceptions apply to the identified Output-Documents.

688 A Printer **MUST** support this attribute. A client **MUST** supply this attribute in each ‘collection’
689 value and it **MUST** be the first attribute of each ‘collection’ value. If this attribute is present, then
690 the client **MUST NOT** supply “input-documents”. If this attribute is not the first attribute in a
691 ‘collection’ value, a Printer, depending on implementation, **MUST** either

692

693 a) ignore the “output-documents” attribute or

694 b) reject all attributes in the ‘collection’ value and treat the ‘collection’ values, but not other
695 sibling ‘collection’ values, as unsupported.

696

697 When a client supplies this attribute in a “document-exceptions” attribute of a Send-Documents or
698 Send-URI request, this attribute **MUST NOT** identify Output-Documents whose first Input-Page
699 was sent in an earlier operation. If a Printer receives such a value in a ‘collection’ value, it **MUST**
700 treat all attribute values in such a ‘collection’ value, but not other sibling ‘collection’ values, as
701 unsupported values and return the entire collection value in the Unsupported Attributes group.

702 5.1.3 document-format (mimeMediaType)

703 This attribute has the same meaning as in IPP/1.1. It indicates the document-format for one or more
704 specified Input-Documents. The Printer **MUST** support this attribute. A client **OPTIONALLY**
705 supplies it.

706 5.1.4 document-name (name (MAX))

707 This attribute has the same meaning as in IPP/1.1. It indicates the document-name for one or more
708 specified Input-Documents. The Printer **MUST** support this attribute. A client **OPTIONALLY**
709 supplies it.

710 5.1.5 compression (type3 keyword)

711 This attribute has the same meaning as in IPP/1.1. It indicates the compression for one or more
712 specified Input-Documents. The Printer **MUST** support this attribute. A client **OPTIONALLY**
713 supplies it.

714 5.1.6 document-natural-language (naturalLanguage)

715 This attribute has the same meaning as in IPP/1.1. It indicates the document-natural-language for
716 one or more specified Input-Documents. The Printer **MAY** support this attribute. A client
717 **OPTIONALLY** supplies it.

718 5.1.7 page-ranges (1setOf rangeOfInteger (1:MAX))

719 This attribute has the same meaning as in IPP/1.1. It redefines each Input-Document to contain only
720 the specified Input-Pages. See section 5.2.3 for how this attribute interacts with “pages”.. The
721 “multiple-document-handling” attribute affects the algorithm for numbering Input-Pages when this
722 attribute is a Job attribute but when it is a Document-Exception attribute. When this attribute is a
723 Document-Exception attribute, the values of the “page-ranges” attribute specify the Input-Pages to
724 select from each of the identified Input-Documents separately, For example, if this attribute has the
725 value “3:5” and is associated with two Input-Documents A and B, Input-Document A redefined to
726 contain just two pages: 3 and 5, and Input-Document B also contains just pages 3 and 5. The Printer
727 MAY support this attribute. A client OPTIONALLY supplies it.

728 5.1.8 finishings (1setOf type2 enum)

729 This attribute has the same meaning as in IPP/1.1. It indicates the finishings for one or more
730 specified Output-Documents. As a Job Template attribute, it affects each Output-Document
731 produced by the Job. For example, all the sheets of each Output-Document are stapled together. As
732 a Document-Exceptions attributes, it affects only the specified Output-Documents. The Printer
733 MAY support this attribute. A client OPTIONALLY supplies it.

734 The next section gives further information about this attribute, but this information is the same for
735 all Output-Document attributes that might be added later.

736 5.1.8.1 Common Behavior for Output-Document Attributes

737 This attribute is directly associated with an Input-Document or Output-Document. This means that it
738 is effectively associated with one or more Output-Documents according to the rules of section 15,
739 and this attribute affects those Output-Documents.

740 5.1.9 sides (type2 keyword)

741 This attribute has the same meaning as in IPP/1.1. It indicates the sides for one or more specified
742 Output-Pages. As a Job Template attribute, it affects each Sheet produced by the Job. As a
743 Document-Exceptions attributes, it affects only the specified Sheets. The Printer MAY support this
744 attribute. A client OPTIONALLY supplies it.

745 The next section gives further information about this attribute, but this information is the same for
746 all Sheet attributes, including “media” which is discussed in section 5.1.10

747 5.1.9.1 Common Behavior for Sheet Attributes

748 This attribute is directly associated with an Input-Document or Output-Document. This means that it
749 is effectively associated with one or more Output-Pages according to the rules of section 15, and this
750 attribute affects the Sheets containing the specified Output-Pages.

751 Because this attribute affects a Sheet, but is effectively associated with an Output-Page, a Sheet that
752 contains two or more Output-Pages may have conflicting values of this attribute. This observation

753 leads to two rules, one for the first Output-Page that this attribute is effectively associated with and
754 one for the last Output-Page that this attribute is effectively associated with.

755 a) For the first Output-Page: if the value of this attribute is effectively associated with Output-
756 Page i, and if Output-Page i is not the first Output-Page contained on a Sheet and if the value
757 of this attribute differs from the value of this attribute for the preceding Output-Page i-1,
758 then Output-Page i MUST start a new Sheet and the Printer MUST issue a warning by
759 adding ‘job-warnings-detected’ to the “job-state-reasons” and by increasing the value of the
760 “job-warnings-count” Job Description attribute by 1.

761 b) For the last Output-Page: if the value of this attribute is effectively associated with Output-
762 Page i, and if Output-Page i is not the last Output-Page contained on a Sheet and if the value
763 of this attribute differs from the value of this attribute for the following Output-Page i+1,
764 then Output-Page i+1 MUST start a new Sheet and the Printer MUST issue a warning by
765 adding ‘job-warnings-detected’ to the “job-state-reasons” and by increasing the value of the
766 “job-warnings-count” Job Description attribute by 1.

767 5.1.10 media (type3 keyword | name(MAX))

768 This attribute has the same meaning as in IPP/1.1. It indicates the media for one or more specified
769 Output-Pages. As a Job Template attribute, it affects each Sheet produced by the Job. As a
770 Document-Exceptions attributes, it affects only the specified Sheets. The Printer MAY support this
771 attribute. A client OPTIONALLY supplies it.

772 See section 5.1.9.1 for additional information. The section describes the common behavior of all
773 Sheet attributes.

774 5.1.11 Why not “document-exceptions-default”

775 There is no “document-exceptions-default” attribute because it adds complicated rules for a Printer
776 to implement. The problems are best illustrated with examples.

777 If there were a “document-exceptions-default” and it contained a “sides” and “media” exception for
778 the first Output-Page, and if a client submitted a Job with no “sides” attribute and with “media” as a
779 Job attribute with no exceptions, a possible meaning is that the Printer uses the client’s requested
780 media for the entire Job and the sides specified by the “sides-default” and the “sides” value in
781 “document-exceptions-default”. So in this example, the Printer ignores the “document-exceptions-
782 default” attribute for “media”, but uses it for “sides” because the Printer uses it for an attribute
783 “xxx” only when it uses “xxx-default”.

784 5.1.12 document-exceptions-supported (1setOf type1 keyword)

785 This attribute specifies the supported values of the “document-exceptions” attribute. A client can
786 use this attribute to determine what Document-Exceptions attributes the Printer supports.

787 This attribute contains the name of each attribute that the Printer supports in a ‘collection’ value of
788 the “document-exceptions” attribute. This attribute MUST contain the keywords “input-
789 documents” and “output-documents” because a Printer MUST support these attributes. This
790 attribute MUST also contain the name of each attribute that can be a document-exception. For
791 example, this attribute contains the keyword “sides” if and only if the Printer supports “sides” in a
792 ‘collection’ value of the “document-exceptions” attribute.

793 Standard keyword values are:

- 794 - 'none': no attributes are supported in the “document-exceptions” attribute
- 795
- 796 - 'input-documents': the “input-document” attribute is supported
- 797 - 'output-documents': the “output-document” attribute is supported
- 798 - 'document-format': The "document-format" attribute is supported
- 799 - 'document-name': The "document-name" attribute is supported
- 800 - 'compression': The "compression" attribute is supported
- 801 - 'document-natural-language': The "document-natural-language" attribute is supported
- 802 - 'page-ranges': The "page-ranges" attribute is supported
- 803 - 'finishings': The "finishing" attribute is supported
- 804 - 'sides': The "sides" attribute is supported
- 805 - 'media': The "media" attribute is supported

806 5.2 page-exceptions (1setOf collection)

807 This OPTIONAL Job Template attribute contains attributes that are associated with Input-Pages and
808 Output-Pages and that are treated as page exceptions. Such attributes are called “Page-Exceptions”
809 attributes.

810
811 If this attribute is not present in a Job, there are no Page-Exceptions attributes within the Job. If it is present,
812 the value consists of one or more ‘collection’ values, where each ‘collection’ value identifies one or more
813 Input-Pages or Output-Pages and contains one or more Job Template attributes which act as exceptions to
814 the corresponding Job Template attributes for the specified Input-Pages or Output-Pages.

815
816 The first attribute of each ‘collection’ value MUST be either “input-documents” or “output-documents”.

817
818 The second attribute MUST be “pages” and this attribute identifies either
819

- 820 - the Input-Pages relative to the Input-Document specified by “input-documents” or
- 821 - the Output-Pages relative to the Output-Document specified by “output-documents”.

822 The Page-Exceptions attributes applies to the identified Input-Pages or Output-Pages, which need not be
 823 contiguous.

824
 825 The remaining attributes in the ‘collection’ value are the Job Template attributes that are exceptions for the
 826 specified Input-Pages or Output-Pages.

827 There may be more than one way for a client to arrange Page-Exception attributes in ‘collection’ values.
 828 For example, if an Output-Document contains 10 Output-Pages to be printed 1-sided on white letter paper
 829 and Output-Page 1 is to be two sided with blue letter paper and Document 2 is to be two sided with white
 830 letter paper, there are two possible ways to group the exceptions. The client could specify the two
 831 exceptions for Output-Page 1 in one ‘collection’ value and the single exception for Output-Page 2 in second
 832 ‘collection’ values, or it could specify “two-sided” for Output-Pages 1 and 2 in one ‘collection’ value and
 833 “blue letter paper” for Output-Document 1 in another ‘collection’ value.

834 If the “pages” and the “input-documents” or “output-documents” identify Input-Pages or Output-Pages that
 835 don’t exist, the Printer silently ignores them and associates the Page-Exceptions with those Input-Pages or
 836 Output-Pages that do exist. A client MUST not allow two ‘collection’s values to be associated with the
 837 same Input-Page or Output-Page and to contain the same Page-Exception attribute with different values. If
 838 there is such a conflict, the Printer can use either value, and it MUST issue a warning. It does so by adding
 839 ‘job-warnings-detected’ to the “job-state-reasons” and by increasing the value of the “job-warnings-count”
 840 Job Description attribute by 1. If the Printer detects this conflict while it is processing a Job-Submission
 841 operation, it MUST return the ignored value in the Unsupported attributes.

842 When a Client receives this attribute in a Get-Jobs or Get-Job-Attributes, the value MUST contain the same
 843 ‘collection’ values received in Job-Submission operations, except for those ‘collection’ values the Printer
 844 returned in the Unsupported Attributes.

845 Each ‘collection’ value of this attribute has either of the two forms as defined below. The ‘collection’
 846 values NEED NOT all be of the same form.

847 For the first form, the client MUST supply “input-documents” as the first attribute and the “pages” attribute
 848 as the second attribute. The client OPTIONALLY supplies the remaining attributes in any order.

| <u>Attribute name</u> | <u>syntax</u> | <u>In request</u> | <u>Printer Support</u> |
|-----------------------|--------------------------|-------------------|------------------------|
| input-documents | rangeOfInteger(MAX) | MUST | MUST |
| pages | rangeOfInteger(MAX) | MUST | MUST |
| sides | type2 keyword | MAY | MAY |
| media | type3 keyword name(MAX | MAY | MAY |

849 For the second form, the client MUST supply “output-documents” as the first attribute and the “pages”
 850 attribute as the second attribute. The client OPTIONALLY supplies the remaining attributes in any order.

| <u>Attribute name</u> | <u>syntax</u> | <u>In request</u> | <u>Printer Support</u> |
|-----------------------|---------------------------|-------------------|------------------------|
| output-documents | rangeOfInteger(MAX) | MUST | MUST |
| pages | rangeOfInteger(MAX) | MUST | MUST |
| sides | type2 keyword | MAY | MAY |
| media | type3 keyword name(MAX) | MAY | MAY |

851 The following sections describe each attribute in the above table.

852 5.2.1 input-documents (rangeOfInteger (1:MAX))

853 See section 5.1.1 for details of this attribute.

854 5.2.2 output-documents (rangeOfInteger (1:MAX))

855 See section 5.1.2 for details of this attribute.

856 5.2.3 pages (1setOf rangeOfInteger(1:MAX))

857 This attribute identifies one or more Input-Pages or Output-Pages by specifying one or more ranges
858 of numbers (see section 4.1 for the rules on associating a number with each Input-Page or Output-
859 Page). The “1setOf” allows noncontiguous Input-Page or Output-Pages. The Page-Exceptions apply
860 to the identified Input-Pages or Output-Pages.

861 If the “page-ranges” attribute (see section 5.1.7) is associated with an Input-Document, the Input-
862 Pages identified by this attribute are the same as when “page-ranges” is not present. However, this
863 attribute may identify pages that are deselected for printing by the “page-ranges” attribute. For
864 example, if the value of “page-ranges” is “5:10” and this attribute identifies Input-Pages “3:6”, this
865 attribute identifies two Input-Pages (3 and 4) that are not printed and two that are (5 and 6)

866 If a Printer support the “page-exceptions” attribute, it MUST support this attribute. A client MUST
867 supply this attribute in each ‘collection’ value of the “page-exceptions” attribute and it MUST be
868 the second attribute of each ‘collection’ value. If this attribute is not the in the correct position in a
869 ‘collection’ value (i.e. first or second as defined above), a Printer, depending on implementation,
870 MUST either

- 871 c) ignore the “pages” attribute or
- 872 d) reject all attributes in the ‘collection’ value and treat the ‘collection’ values, but not other
- 873 sibling ‘collection’ values, as unsupported.
- 874
- 875

876 When a client supplies this attribute in a Send-Document or Send-URI request, this attribute MUST
877 NOT identify Output-Pages sent in an earlier operation. If a Printer receives such a value in a
878 ‘collection’ value, it MUST treat all such values, but not other sibling ‘collection’ values, as
879 unsupported values.

880

881 See section 5 for details of usage of this attribute.

882 5.2.4 sides (type2 keyword)

883 This attribute has the same meaning as in IPP/1.1. It indicates the sides for one or more specified
884 Output-Pages. As a Job Template attribute, it affects each Sheet produced by the Job. As a Page-
885 Exceptions attributes, it affects only the specified Sheets. The Printer MAY support this attribute. A
886 client OPTIONALLY supplies it.

887 See section 5.1.9.1 for additional information. The section describes the common behavior of all
888 Sheet attributes.

889 5.2.5 media (type3 keyword | name(MAX))

890 This attribute has the same meaning as in IPP/1.1. It indicates the media for one or more specified
891 Output-Pages. As a Job Template attribute, it affects each Sheet produced by the Job. As a Page-
892 Exceptions attributes, it affects only the specified Sheets. The Printer MAY support this attribute. A
893 client OPTIONALLY supplies it.

894 See section 5.1.9.1 for additional information. The section describes the common behavior of all
895 Sheet attributes.

896 5.2.6 Why not “page-exceptions-default”

897 There is no “page-exceptions-default”. See section 5.1.11 for the reasons.

898 5.2.7 page-exceptions-supported (1setOf type1 keyword)

899 This attribute specifies the supported values of the “page-exceptions” attribute. A client can use this
900 attribute to determine what exception attributes the Printer supports.

901 This attribute contains the name of each attribute that the Printer supports in a ‘collection’ value of
902 the “page-exceptions” attribute. This attribute MUST contain the keywords “input-documents”,
903 “output-documents” and “pages” because a Printer MUST support these attributes. This attribute
904 MUST also contain the name of each attribute that can be a page-exception. For example, this
905 attribute contains the keyword “sides” if and only if the Printer supports “sides” in a ‘collection’
906 value of the “page-exceptions” attribute.

907 Standard keyword values are:

908 - 'none': no attributes are supported in the “page-exceptions” attribute

910 - 'input-documents': the “input-document” attribute is supported

911 - 'output-documents': the “output-document” attribute is supported

- 912 - 'pages': The "pages " attribute is supported
- 913 - 'sides': The "sides" attribute is supported
- 914 - 'media': The "media" attribute is supported

915 5.3 pages-per-subset (1setOf integer)

916 A client **OPTIONALLY** supplies this attribute, and a Printer **OPTIONALLY** supports this attribute.
917 If a Printer supports the Page-Subset Document Case, it **MUST** support this attribute.

918
919 When this attribute is present, it effectively partitions one or more Input-Documents into
920 contiguous subsets of Input-Pages. Each subset is defined to be an Output-Document

921
922 The value of the attribute is a set of one or more integers, where each integer specifies the number
923 of Input-Pages in a subset, and the set is treated as a repeating sequence of integers. Thus, when the
924 attribute contains a single integer, the integer specifies the number of Input-Pages in each subset, as
925 a repeating sequence of the single integer. When the number of integers in this attribute exceeds 1,
926 the first integer specifies the number of Input-Pages in the first subset, the second integer specifies
927 the number of Input-Pages in the second subset and so on. If numbers in this attribute are exhausted
928 before partitioning all of the Input-Pages, the Printer starts at the beginning of the sequence again
929 and continues until all Input-Pages are partitioned.

930
931 If the job contains more than one Input-Document, the Input-Pages are treated as a single stream of
932 Input-Pages which are partitioned into contiguous subsets with some subsets possibly belonging to
933 more than one Input-Document.

934
935 If the number of Input-Pages available for the last subset is less than the number specified by this
936 attribute, the Printer **MUST** treat the last subset as an Output-Document and **MUST** issue a warning
937 by adding 'job-warnings-detected' to the "job-state-reasons" and by increasing the value of the
938 "job-warnings-count" Job Description attribute by 1.

939 5.3.1 Why not "pages-per-subset-default"

940 There is no "pages-per-subset-default" because there is no mechanism for a client to specify that
941 there are no Input-Page subsets except to omit this attribute, which would cause the Printer to use
942 the "pages-per-subset-default" attribute and create the default subsets. Without this attribute, a
943 client can achieve subsets only by including the "pages-per-subset" attribute in the Job and the
944 default is no subsetting. Also, if there were a defaulting mechanism, it isn't clear that customers
945 would use the same partitioning over and over..

946 5.3.2 pages-per-subset-supported (Boolean)

947 This attribute specifies whether the Printer supports the Page-Subset Document Case. If the
948 attribute is present and has a value of “true”, the Printer supports the Page-Subset Document Case.
949 Otherwise, the Printer doesn’t support the Page-Subset Document Case

950 6. New Job Description attributes

951 6.1.1 job-warnings-count (integer)

952 This OPTIONAL attribute specifies the total number of warnings that a Printer has generated while
953 processing and printing the Job. At the beginning of a Job, the value MUST be 0. It MUST increase
954 by 1, each time the Printer generates a warning.

955 7. New Job Description Values

956 7.1.1 job-warnings-detected value for job-state-reasons (1setOf type2 keyword)

957 If the Printer supports the value ‘job-warnings-detected’, the Printer MUST add it to “job-state-
958 reasons” when it generates the first warning message. That is, a single occurrence of this value is
959 present in the “job-state-reasons” if the Printer has generated one or more warnings.

960 8. Extended Role of Some Operation Attributes

961 In IPP/1.1, the following attributes are operation attributes in all Job-Submission operations except Create-
962 Job, but the Printer doesn’t put their values into the Job object.

- 963
- 964 - document-format
- 965 - document-name
- 966 - compression
- 967 - document-natural-language

968
969 With the Exception Extension, these attributes also become:

- 970
- 971 - Operation attributes in the Create-Job and Validate-Job operation when all or most Input-
972 Documents have the same attribute value.

- 973 - Job Template attributes, so their values are accessible to a client via the Get-Job-Attributes and Get-
974 Jobs operation.
- 975 - Job Description attributes, for legacy reasons so their values are accessible to a client via the Get-
976 Job-Attributes and Get-Jobs operation via the Job Description group name.
- 977 - Document-Exceptions attributes, so the values are associated with one Input-Document (possible in
978 IPP/1.1) and a client can query the attributes via Get-Job-Attributes and Get-Jobs operation (not
979 possible in IPP/1.1).

980 If a Printer supports the Exception Extension and if it supports an attribute in this section, it MUST support
981 the attribute in the three contexts above. In IPP/1.1, a Printer MUST support all attributes in this section
982 except the “document-natural-language” attribute. This effectively means that if a Printer supports this
983 extension, it MUST support all of the attributes in this section except “document-natural-language” in the
984 three contexts described above.

985
986 When one of the attributes in this section is an operation attribute in Print-Job, Print-URI or Create-Job, it
987 becomes a Job Template attribute in the newly created Job object. If one of these attributes is a Document-
988 Exceptions attribute, that attribute overrides the Job level attribute for the specified Input-Document.

989
990 When one of the attributes in this section is an operation attribute in Validate-Job, it is validated as if it
991 were an operation attribute of Create-Job.

992
993 When one or more of the attributes in this section is an operation attribute in Send-Document or Send-URI
994 request, they are put into a ‘collection’ value that is added to the “document-exceptions” attribute. See
995 section 5.10 for a discussion of possible conflicts.

996 9. Extensions to Printer Operations

997 The sections below specify the extensions to the groups within IPP 1.1 operations. If an operation or a
998 group within an operation is not mentioned, this extension does not change that operation or group,
999 respectively.

1000

1001 9.1 Create-Job and Validate-Job Operation Requests

1002 Attributes are added to the operation attributes group.

1003

1004 Group 1: Operation Attributes

1005

1006 Add the attributes specified in section 6: “document-format”, “document-name”,
1007 “compression” and “document-natural-language”, so that a client can specify these
1008 attributes, at the job level.

1009 9.2 Send-Document and Send-URI Operation Requests

1010 Attributes are added to the Operation Attributes group.

1011

1012 Group 1: Operation Attributes

1013

1014 "input-document-number" (integer):

1015

1016 The client **OPTIONALLY** supplies this attribute in order to inform the printer about the
1017 order of documents when the printer is sending the Input-Documents asynchronously.
1018 The first Input-Document is 1, and subsequent Input-Documents are numbered
1019 sequentially. If the value of "last-document" is 'true', then the value of this attribute is
1020 also the total number of Input-Documents in the Job. If a client supplies this attribute in
1021 one Send-Document or Send-URI operation in a Job, it **MUST** send it in all such
1022 operations. A Printer deals with missing Input-Documents in the same way as without
1023 this attribute except that a time-out can occur with Input-Documents anywhere in the
1024 Job. For example, a Printer could receive Input-Documents 1 and 3 and not 2.

1025

1026 "document-exceptions" (1setOf collection):

1027

1028 The client **OPTIONALLY** supplies this attribute. See section 5.1 for details. The Printer
1029 **MUST** support this attribute if it supports the "document-exceptions" Job Template
1030 attribute. If the job doesn't contain a "document-exceptions" attribute, this attribute is
1031 added to the Job. Otherwise, the 'collection' values from this attribute are appended to
1032 the existing "document-exceptions" attribute. See section 5.1 for rules of resolving
1033 conflicts. Also the "input-documents" attribute is added to any 'collection' value that
1034 contains neither an "input-documents" nor "output-documents" attribute.

1035

1036 "page-exceptions" (1setOf collection):

1037

1038 The client **OPTIONALLY** supplies this attribute. See section 5.2 for details. The Printer
1039 **MUST** support this attribute if it supports the "page-exceptions" Job Template attribute.
1040 If the job doesn't contain a "page-exceptions" attribute, this attribute is added to the Job.
1041 Otherwise, the 'collection' values from this attribute are appended to the existing "page-
1042 exceptions" attribute. See section 5.2 for rules of resolving conflicts. Also the "input-
1043 documents" attribute is added to any 'collection' value that contains neither an "input-
1044 documents" nor "output-documents" attribute.

1045 10. Examples

1046 This section currently contains 3 examples for various relationships of Input-Documents and Output-
1047 Documents.. The first example is for the Degenerate Case only. The second and third cases are for the
1048 Separate-Document Case, the Single-Documents Case and the Page-Subset Documents Case.

1049

1050 Brackets are used to delimit the beginning and end of each Collection value.

1051 10.1 First Page of Single Document is Letterhead

1052 In the first example, the Printer produces 1 copy of a single Output-Document. It is printed on letter-
1053 paper using Print-Job. The first Output-Page of the Output-Document is letterhead paper.
1054

1055 10.1.1 Degenerate Case.

1056 There is one Input-Document A which produces one Output-Document.

1057 Print-Job

1058 job attributes group

1059 media: letter

1060 page-exceptions: {

1061 output-documents: 1:1 (I could have used input-documents: 1:1 as well)

1062 pages: 1:1

1063 media: letterhead }

1064 end-of-attributes

1065 Input-Document A

1066

1068 10.2 First Page of Several Documents is Blue

1069 In the second example, the Printer produces 3 copies of each Output-Document. Each is stapled and
1070 printed on letter-paper, two-sided using Create-Job. The first Output-Page of each Output-Document is
1071 blue-letter paper and one-sided. All Input-Documents are PostScript.

1072

1073 Attributes that differ between cases are in bold. The values for the attribute “input-documents” changes
1074 with each example, but could be “1:100” for all.

1075 10.2.1 Separate-Documents Case.

1076 There are two Input-Documents A and B which produce two Output-Documents.

1077

1078 Create-Job

1079 operations attributes group

1080 document-format: application/PostScript

1081 job attributes group

1082 * **multiple-document-handling: separate-documents-collated-copies**

1083 sides: two-sided-long-edge

1084 media: letter

1085 copies: 3

1086 finishings: stapling

1087 page-exceptions: {

1088 output-documents: 1:2 (I could have used input-documents: 1:2 as well)

1089 pages: 1:1

1090 sides: one-sided

1091 media: blue-letter }

1092 end-of-attributes

1093 Send-Document
 1094 end-of-attributes
 1095 Input-Document A
 1096 Send-Document
 1097 end-of-attributes
 1098 Input-Document B
 1099

1100 10.2.2 Single-Documents Case

1101 There are two Input-Documents A and B and only one Output-Document.

1102
 1103 Create-Job
 1104 operations attributes group
 1105 document-format: application/PostScript
 1106 job attributes group
 1107 **multiple-document-handling: single-document**
 1108 sides: two-sided-long-edge
 1109 media: letter
 1110 copies: 3
 1111 finishings: stapling
 1112 page-exceptions: {
 1113 output-documents: 1:1 (I could have used input-documents: 1:1)
 1114 pages: 1:1
 1115 sides: one-sided
 1116 media: blue-letter }
 1117 end-of-attributes
 1118 Send-Document
 1119 end-of-attributes
 1120 Input-Document A
 1121 Send-Document
 1122 end-of-attributes
 1123 Input-Document B
 1124

1125 10.2.3 Page-Subset Documents Case

1126 There are two Input-Documents A and B. . The first Input-Document contains 10 Pages and the second
 1127 one 15 pages. There are 7 Output-Documents with 3 pages, 5 pages, 4 pages, 2 pages, 3 pages, 5 pages
 1128 and 3 pages. The “ pages-per-subset” attributes wraps after the first four Output-Documents and starts
 1129 with “3” again. After consuming 22 Input-Pages, the next number is “4”, but only 3 pages remain. So
 1130 the last Output-Document is short. These value show two boundary cases.

1131
 1132 Create-Job
 1133 operations attributes group
 1134 document-format: application/PostScript
 1135 job attributes group
 1136 **multiple-document-handling: separate-documents-collated-copies**
 1137 **pages-per-subset: 3, 5, 4, 2**
 1138 sides: two-sided-long-edge
 1139 media: letter
 1140 copies: 3
 1141 finishings: stapling

```

1142     page-exceptions: {
1143         output-documents: 1:7           (I could have used output-documents: 1:100 to be safe)
1144         pages: 1:1
1145         sides: one-sided
1146         media: blue-letter }
1147     end-of-attributes
1148 Send-Document
1149     end-of-attributes
1150     Input-Document A
1151 Send-Document
1152     end-of-attributes
1153     Input-Document B

```

1154 10.3 First Page is Blue and First Document is not stapled

1155 In the third example, the Printer produces 3 copies of each Output-Document. Each is stapled and
 1156 printed on letter-paper, two-sided using Create-Job. The third and fourth Output-Pages of each Output-
 1157 Document is blue-letter paper and one-sided. The second Output-Document is not stapled. All files are
 1158 PostScript except the second which is html.

1159
 1160 Attributes that differ between cases are in bold. The values for the attribute “input-documents” changes
 1161 with each example, but could be “1:100” for all.

1162 10.3.1 Separate-Documents Case

1163 There are two Input-Documents A and B which produce two Output-Documents.

1164
 1165 There are three version presented here in order to show three different places to put the attributes
 1166 associated with an Input-Document. The differences are in *bold-italic*.

1167

1168 First solution:

1169

1170 Create-Job

1171 operations attributes group

1172 document-format: application/PostScript

1173 job attributes group

1174 **multiple-document-handling: separate-documents-collated-copies**

1175 sides: two-sided-long-edge

1176 media: letter

1177 copies: 3

1178 finishings: stapling

1179 document-format: application/PostScript

1180 document-exceptions: {

1181 output-documents: 2:2 (I could have used input-documents: 2:2 & merged with next)

1182 finishings: none }

1183 {

1184 ***input-documents: 2:2*** *next value of multi-value*

1185 ***document-format: text/html***

1186 page-exceptions: {

1187 output-documents: 1:2 (I could have used input-documents: 1:2 as well)

1188 pages: 3:4

1189 sides: one-sided
 1190 media: blue-letter }
 1191 end-of-attributes
 1192 Send-Document
 1193 end-of-attributes
 1194 Input-Document A
 1195 Send-Document
 1196 end-of-attributes
 1197 Input-Document B
 1198
 1199 Second solution:
 1200
 1201 Create-Job
 1202 operations attributes group
 1203 document-format: application/PostScript
 1204 job attributes group
 1205 **multiple-document-handling: separate-documents-collated-copies**
 1206 sides: two-sided-long-edge
 1207 media: letter
 1208 copies: 3
 1209 finishings: stapling
 1210 document-format: application/PostScript
 1211 document-exceptions: {
 1212 output-documents: 2:2
 1213 finishings: none }
 1214 page-exceptions: {
 1215 output-documents: 1:2 (I could have used input-documents: 1:2 as well)
 1216 pages: 3:4
 1217 sides: one-sided
 1218 media: blue-letter }
 1219 end-of-attributes
 1220 Send-Document
 1221 end-of-attributes
 1222 Input-Document A
 1223 Send-Document
 1224 *Operation attributes group*
 1225 *document-format: text/html*
 1226 end-of-attributes
 1227 Input-Document B
 1228
 1229 Third solution:
 1230
 1231 Create-Job
 1232 operations attributes group
 1233 document-format: application/PostScript
 1234 job attributes group
 1235 **multiple-document-handling: separate-documents-collated-copies**
 1236 sides: two-sided-long-edge
 1237 media: letter
 1238 copies: 3
 1239 finishings: stapling
 1240 document-format: application/PostScript
 1241 page-exceptions: {

1242 output-documents: 1:2 (I could have used input-documents: 1:2 as well)
 1243 pages: 3:4
 1244 sides: one-sided
 1245 media: blue-letter }
 1246 end-of-attributes
 1247 Send-Document
 1248 end-of-attributes
 1249 Input-Document A
 1250 Send-Document
 1251 *Operation attributes group*
 1252 *document-exceptions: {*
 1253 *input-documents: 2:2*
 1254 *document-format: text/html*
 1255 *finishings: none }*
 1256 end-of-attributes
 1257 Input-Document B
 1258

1259 10.3.2 Single-Documents Case

1260 There are two Input-Documents A and B and only one Output-Document.

1261
 1262 There are three solutions. The Page-Exception attributes are in Create-Job in the first solution and in
 1263 Send-Document in the last two solutions. The Document-Exception attribute is directly in the operation
 1264 attributes of Send-Document in the first two solutions and in the document-exceptions attributes of
 1265 Send-Document in the third solution. The differences are in *bold-italic*.

1266
 1267 First solution:

1268 Create-Job
 1269 operations attributes group
 1270 document-format: application/PostScript
 1271 job attributes group
 1272 **multiple-document-handling: single-document**
 1273 sides: two-sided-long-edge
 1274 media: letter
 1275 copies: 3
 1276 finishings: stapling
 1277 document-exceptions: {
 1278 output-documents: 2:2 (This is ignored because there is no 2nd document)
 1279 finishings: none }
 1280 *page-exceptions: {*
 1281 *input-documents: 1:1* (*I could have used output-documents: 1:1*)
 1282 *pages: 3:4*
 1283 *sides: one-sided*
 1284 *media: blue-letter }*
 1285 end-of-attributes
 1286 Send-Document
 1287 end-of-attributes
 1288 Input-Document A
 1289 Send-Document
 1290 Operation attributes group
 1291

1292 *document-format: text/html*
 1293 end-of-attributes
 1294 Input-Document B
 1295

1296 Second solution:

1297

1298 Create-Job
 1299 operations attributes group
 1300 document-format: application/PostScript
 1301 job attributes group
 1302 **multiple-document-handling: single-document**
 1303 sides: two-sided-long-edge
 1304 media: letter
 1305 copies: 3
 1306 finishings: stapling
 1307 document-exceptions: {
 1308 output-documents: 2:2 (This is ignored because there is no 2nd document)
 1309 finishings: none }
 1310 end-of-attributes

1311 Send-Document
 1312 Operation attributes group
 1313 *page-exceptions: {*
 1314 *input-documents: 1:1* (*I could have used output-documents: 1:1*)
 1315 *pages: 3:4*
 1316 *sides: one-sided*
 1317 *media: blue-letter }*
 1318 end-of-attributes
 1319 Input-Document A

1320 Send-Document
 1321 Operation attributes group
 1322 *document-format: text/html* (this can be here or in the document-exceptions)
 1323 end-of-attributes
 1324 Input-Document B
 1325

1326 Third solution:

1327

1328 Create-Job
 1329 operations attributes group
 1330 document-format: application/PostScript
 1331 job attributes group
 1332 **multiple-document-handling: single-document**
 1333 sides: two-sided-long-edge
 1334 media: letter
 1335 copies: 3
 1336 finishings: stapling
 1337 document-exceptions: {
 1338 output-documents: 2:2 (This is ignored because there is no 2nd document)
 1339 finishings: none }
 1340 end-of-attributes

1341 Send-Document
 1342 Operation attributes group
 1343 *page-exceptions: {*
 1344 *input-documents: 1:1* (*I could have used output-documents: 1:1*)

1345 *pages: 3:4*
 1346 *sides: one-sided*
 1347 *media: blue-letter }*
 1348 end-of-attributes
 1349 Input-Document A
 1350 Send-Document
 1351 Operation attributes group
 1352 *document-exceptions: {*
 1353 *input-documents: 2:2*
 1354 *document-format: text/html }*
 1355 end-of-attributes
 1356 Input-Document B

1357 10.3.3 Page-Subset Documents Case

1358 There are two Input-Documents A and B. . The first Input-Document contains 10 Pages and the second
 1359 one 15 pages. There are 7 Output-Documents with 3 pages, 5 pages, 4 pages, 2 pages, 3 pages, 5 pages
 1360 and 3 pages. The “pages-per-subset” attributes wraps after the first four Output-Documents and starts
 1361 with “3” again. After consuming 22 Input-Pages, the next number is “4”, but only 3 pages remain. So
 1362 the last Output-Document is short.

1363
 1364 Create-Job
 1365 operations attributes group
 1366 document-format: application/PostScript
 1367 job attributes group
 1368 **multiple-document-handling: separate-documents-collated-copies**
 1369 **pages-per-subset: 3, 5, 4, 2**
 1370 sides: two-sided-long-edge
 1371 media: letter
 1372 copies: 3
 1373 finishings: stapling
 1374 document-exceptions: {
 1375 output-documents: 2:2
 1376 finishings: none }
 1377 page-exceptions: {
 1378 output-documents: 1:7 (I could have used input-documents: 1:100 to be safe)
 1379 pages: 3:4
 1380 sides: one-sided
 1381 media: blue-letter }
 1382 end-of-attributes
 1383 Send-Document
 1384 end-of-attributes
 1385 Input-Document A
 1386 Send-Document
 1387 Operation attributes group
 1388 document-format: text/html (this can be here or in the document-exceptions)
 1389 end-of-attributes
 1390 Input-Document B

1391 11. IANA Considerations

1392

1393 IANA will be called on to register the Job Template attributes defined in this document, using the
1394 procedures outlined in [ipp-mod].

1395 12. Internationalization Considerations

1396 The IPP extensions defined in this document require the same internationalization considerations as any of
1397 the Job Template attributes defined in IPP/1.1 [ipp-mod].

1398 13. Security Considerations

1399 The IPP extensions defined in this document require the same security considerations as any of the Job
1400 Template attributes defined in IPP/1.1 [ipp-mod].

1425 16. Appendix A: Rules for Attribute Association

1426 For each category of attribute, there is a rule:

1427

1428

- Input-Documents: such an attribute

1429

- cannot be directly associated with Input-Pages, Output-Pages, or Output-Documents.

1430

- can be directly associated with an Input-Document, and it affects the Input-Document it is associated with.

1431

1432

- can be associated with a Job and it affects all Input-Documents that don't have the attribute associated with it.

1433

1434

1435

- Output-Documents: such an attribute

1436

- can never be directly associated with an Input-Page or Output-Page.

1437

- can be directly associated with an Output-Document, and it affects the Output-Document it is associated with.

1438

1439

- can be directly associated with an Input-Document. If that Input-Document produces a first Output-Page for one or more Output-Documents, the attribute is effectively associated with each such Output-Document that doesn't have the attribute directly associated with it. If that Input-Document doesn't produce any first Output-Pages of an Output-Document, it is ignored and the Printer produces a warning message.

1440

1441

1442

1443

- can be associated with a Job and it affects all Output-Documents that don't have the attribute associated with it.

1444

1445

1446

1447

- Sheets: such attributes

1448

- can be directly associated with an Output-Page, and it affects the Output-Page it is associated with.

1449

1450

- can be directly associated with an Input-Page, and it is effectively associated with the Output-Page determined by the relationship described for the four cases in section 4.2 if that Output-Page doesn't have the attribute directly associated with it

1451

1452

- can be directly associated with an Output-Document, and it affects all Output-Pages in the specified Output-Document that don't have the attribute associated directly with it or the corresponding Input-Page.

1453

1454

1455

- can be directly associated with an Input-Document, and it is effectively associated with all Input-Pages in the specified Input-Document that don't have the attribute associated directly with it. By transitivity, the attribute is effectively associated with all corresponding Output-Pages (see section 4.2) that don't have the attribute associated directly with the them or the containing Output-Document.

1456

1457

1458

1459

- can be associated with a Job and it affects all Output-Pages that don't have the attribute associated with it.

1460

1461

1462

1463

1464 17. Appendix B: Change History

1465 This section summarizes the changes to the document. Each sub-section is in reverse chronological order.
1466 Adding or removing ISSUES that don't change the document are not listed here.

1467 17.1 Changes to the January 3, 2000 version to make the January 31, 2000 version

1468 The following changes to the January 3, 2000 version to make the January 31, 2000 version:

1469 1. Changed the format to be a PWG-DRAFT. No technical content changed.

1470 18. Appendix C: Description of the IEEE-ISTO PWG

1471 The Printer Working Group (or PWG) is a Program of the IEEE Industry Standards and Technology
1472 Organization (ISTO) and is an alliance among printer manufacturers, print server developers, operating
1473 system providers, network operating systems providers, network connectivity vendors, and print
1474 management application developers chartered to make printers and the applications and operating systems
1475 supporting them work together better. All references to the PWG in this document implicitly mean "The
1476 Printer Working Group, a Program of the IEEE ISTO." In order to meet this objective, the PWG will
1477 document the results of their work as open standards that define print related protocols, interfaces,
1478 procedures and conventions. Printer manufacturers and vendors of printer related software will benefit from
1479 the interoperability provided by voluntary conformance to these standards.
1480 In general, a PWG standard is a specification that is stable, well understood and is technically competent,
1481 has multiple, independent and interoperable implementations with substantial operational experience, and
1482 enjoys significant public support. The PWG may issue a standard as a PWG standard and/or when
1483 appropriate submit the standard to other standards organizations, such as the IETF, ISO, ITU, IEEE, or
1484 ECMA.
