

The Printer Working Group

1 **IPP Presets**
2 **(PRESET)**

3 Status: Interim

4 Abstract: This document is a whitepaper that describes IPP Presets, a mechanism that
5 enables a set of Job Template attribute values to be applied as a set, to provide IPP print
6 solutions with a way to support a variety of user experience optimizations.

7 This document is a White Paper. For a definition of a "White Paper", see:

List of Figures

70

List of Tables

71 **1 Introduction**

72 This whitepaper defines a system of new IPP attributes that allow a Printer to describe a
73 set of one or more “presets”, which are a set of job template attributes and attribute values
74 that are applied together as a group. Each preset set has a named label and may also
75 have an associated “trigger”, allowing the preset to be applied implicitly in response to the
76 User making a particular settings selection.

77 **2 Terminology**

78 **2.1 Protocol Roles Terminology**

79 This document defines the following protocol roles in order to specify unambiguous
80 conformance requirements:

81 | *Client_*: Initiator of outgoing IPP session requests and sender of outgoing IPP operation
82 requests (Hypertext Transfer Protocol -- HTTP/1.1 [RFC7230] User Agent).

83 | *Printer_*: Listener for incoming IPP session requests and receiver of incoming IPP operation
84 requests (Hypertext Transfer Protocol -- HTTP/1.1 [RFC7230] Server) that represents one
85 or more Physical Devices or a Logical Device.

86 **2.2 Printing Terminology**

87 | All the printing terminology defined in IPP/1.1 Model and Semantics [RFC8011] **isare**
88 applicable here:

89 | *Client_*: Initiator of outgoing IPP session requests and sender of —outgoing IPP operation
90 requests (Hypertext Transfer Protocol (HTTP/1.1) user agent, as defined in [RFC7230]).

91 | *Document_*: An object created and managed by a Printer that contains —description,
92 processing, and status information. A Document object —can have attached data and is
93 bound to a single Job [PWG5100.5].

94 | *'ipp' URI_*: An IPP URI as defined in [RFC3510].

95 | *'ipps' URI_*: An IPP URI as defined in [RFC7472].

96 | *Job_*: An object created and managed by a Printer that contains —description, processing,
97 and status information. The Job also contains zero or more Document objects.

98 | *Logical Device_*: A print server, software service, or gateway that —processes Jobs and
99 either forwards or stores the processed Job or —uses one or more Physical Devices to
100 render output.

101 | *Output Device_*: A single Logical or Physical Device.

102 | *Physical Device_*: A hardware implementation of an endpoint device, e.g., a marking
103 engine, a fax modem, etc.

104 | *Printer_*: Listener for incoming IPP session requests and receiver of —incoming IPP
105 operation requests (HTTP/1.1 server, as defined in [RFC7230]) that represents one or
106 more Physical Devices or a Logical —Device.

107 | **2.3 Other Terms Used in This Document**

108 | *User_*: A person or automata using a Client to communicate with a Printer.

109 | *Preset*: A set of attributes and attribute values that are applied all at once as job settings.

110 | *Trigger*: An attribute and value whose selection causes a Preset to be selected.

111 | **2.4 Acronyms and Organizations**

112 | *IANA*: Internet Assigned Numbers Authority, <http://www.iana.org/>

113 | *IETF*: Internet Engineering Task Force, <http://www.ietf.org/>

114 | *ISO*: International Organization for Standardization, <http://www.iso.org/>

115 | *PWG*: Printer Working Group, <http://www.pwg.org/>

116 3 Requirements for IPP Presets

117 3.1 Rationale for IPP Presets

118 There are circumstances where a number of settings are chosen as a set to achieve some
119 common printing objective or workflow scenario. For example, the act of selecting a 4"x6"
120 media size implies the desire to print photos. If doing so could trigger the automatic
121 selection of an associated group of settings (change media type to glossy photo, setting
122 the print quality to 'best'), that could have a positive user experience benefit. Sometimes
123 these groups of settings are referred to as "presets".

124 Most vendor / model-specific drivers and driver system implement support for such
125 associations, but they do this by including logic in the driver itself. For driverless / omni-
126 driver systems such as IPP Everywhere, some settings collections could be constructed on
127 the Client system, but some could originate from the Printer. IPP needs to be extended to
128 provide attributes to convey these from the Printer to a Client to support Printer-originated
129 "presets", to support the use cases below.

130 There is currently no way for the Printer to supply explicit preset information to the Client.
131 Preset information can be configured by admin, operator, or vendor. A crude facility could
132 be provided using Validate-Job and the "preferred-attributes" in the response, but that
133 requires additional Client / Printer operations that are undesirable. This should be
134 manageable locally to the Client once the settings bundles have been provided to it by the
135 Printer.

136 After the application of a preset, the Client ~~should~~ought to still allow a User to change
137 individual settings. ~~For example, if a preset includes "print-quality" of 'high' (5) and "print-~~
138 ~~color-mode" of 'color', the Client should allow the User to change the "print-quality" to~~
139 ~~'normal' (4). If a preset set "print-quality" to 'high' (5) and "print-color-mode" to 'color', the~~
140 ~~User should still be capable of adjusting the control for "print-quality" to set its value to~~
141 ~~'normal' (4).~~

142 The PWG Semantic Model [\[PWG5105.1\]](#) defined the concept of a "job ticket template".
143 Saved job ticket resources are similar but not exactly the same. In particular they lack the
144 notion of a "trigger".

145 3.2 Use Cases

146 3.2.1 Explicit Preset Selection

147 Bert has found a good recipe for gazpacho on the Web, and wants to print the recipe to put
148 it into his recipe binder. He clicks on the "Print" button in the web page. When the print
149 dialog is presented, he selects the ~~Psettings~~ preset labeled "Recipe for binder". ~~The~~
150 ~~"Recipe for binder" Preset specifies in his print dialog, that selects~~ "2 pages per sheet"

151 ~~page layout, oneand disables two-sided printing, trimming and punching. The Client~~
152 ~~applies the Preset to the settings in the print dialog. Bert clicks on “Print”; the Client all at~~
153 ~~once. Bert decides he wants to re-enable two-sided printing, and does so. As the preset is~~
154 ~~simply a batch application of settings, he is still free to make individual settings choices~~
155 ~~after a preset is applied. He prints the Job. Bertrecipe, cuts it to size, and puts it into his~~
156 recipe binder.

157 **3.2.2 Implicit Preset Selection**

158 Kelli is in the process of printing a photo. In the print dialog, she switches the selected
159 media size from A4 to 4”x6”. Her Client has a Trigger for 4”x6” media size that names a
160 Preset named “Photos”; the “Photos” Preset includes gl~~The Printer has indicated that~~
161 ~~selecting the 4”x6” media size is a trigger to select a preset including selecting a glossy~~
162 photo media type, single-sided printing, and 'high' print quality. The Client acts on the
163 Trigger by applying the settings in the “Photos” Preset~~updates the print dialog and the job~~
164 ~~ticket automatically to include those changes.~~ Kelli is pleased that these choices were
165 made automatically by her system, saving her time and effort.

166 **3.2.3 Client Storing a Saving Preset Settings to Printer**

167 Ernie has constructed his own Preset named “Better Binder Recipe”, and he would like to
168 share it with Bert. Ernie selects that Preset and taps on the “Store Preset on Printer”
169 button. The preset is uploaded to the Printer. When Bert next goes to print, he sees the
170 “Better Binder Recipe” preset that Ernie added to the Printer, and uses that for his next
171 recipe printing tasks.

172 ~~Ernie has constructed his own IPP preset on his system named “Better Binder Recipe”,~~
173 ~~and he would like to share it with Bert. Ernie selects that preset from a list of locally~~
174 ~~created presets and clicks on the “Upload Preset to Printer” button. The preset is uploaded~~
175 ~~to the Printer. When Bert next goes to print, he sees the “Better Binder Recipe” preset that~~
176 ~~Ernie added to the Printer, and uses that for his next recipe printing tasks.~~

177 Exceptions

178 **3.2.4 Overriding Preset Selection**

179 ~~There are no exceptions.~~

180 Bert selects the Preset labeled “Recipe for binder” in his print dialog, that selects “2 pages
181 per sheet” page layout, one-sided printing, trimming and punching. Bert decides he wants
182 to re-enable two-sided printing, and does so using the controls in the print dialog. He prints
183 the recipe and puts it into his recipe binder, pleased that he can take advantage of the
184 power of Presets but still maintain full control over a Job's settings.

185 **3.3 Out of Scope**

186 The following are considered out of scope for this document:

- 187 1. The user interface for Presets
- 188 2. User presentation of these options
- 189 3. Changes to the core IPP specifications

190 3.4 Design Requirements

191 The design requirements for this document are:

- 192 1. Define new IPP attributes ~~that describe~~ specify a Preset as a set of attributes
193 and attribute values that will be applied all at once. ~~Each Preset is to have a~~
194 ~~group when either a unique name~~ particular attribute value is chosen.
- 195 2. ~~Define new IPP attributes that describe a Trigger as an attribute and value and a~~
196 corresponding Preset name, that operates according to the principle “if Trigger
197 attribute value is chosen, then apply Preset”, to support implicit Preset selection.
- 198 3. ~~Support the specification of a “trigger” attribute value in the group, to support~~
199 ~~implicit group selection.~~
- 200 4. Define sections to register all attributes, values, operations, and service types
201 with IANA.

202 4 IPP Presets Definitions

203 This specification defines IPP attributes and operations used for Presets and Triggers.

- 204 5. ~~Support the specification of a “label” or “label key” in the group, to support~~
205 ~~explicit group selection via a name presented to the user, that might be~~
206 ~~localized.~~
- 207 6. Printer Description Attributes
- 208 7. Register all attributes and operations with IANA
- 209 8. job-presets-supported (1setOf collection)

210 5 ~~Technical Solutions/Approaches~~

211 **6 This REQUIRED Printer Description attribute lists named**
212 **Presets that are stored on the Printer. Each collection value**
213 **contains a REQUIRED “preset-name (keyword | name(MAX))”**
214 **attribute and one or more Job Template attributes that are part**
215 **of the Preset. The attribute names and values MUST be**
216 **supported by the Printer and be listed in its Printer Description**
217 **attributes. The set of attribute values MUST NOT be in conflict**
218 **with one another as described by a constraint in “job-**
219 **constraints-supported”.**

220 | ~~This specification defines the following: an IPP attribute that creates an association~~
221 | ~~between a set of Job Template attribute names and values (a “preset”); define ancillary~~
222 | ~~member attributes to uniquely identify each preset set and allow a Client to support explicit~~
223 | ~~named selection of a set; and also define a mechanism that a Client can use to cause an~~
224 | ~~implicit selection of a preset set.~~

225 | **6.1 job-presets-supported (1setOf collection)**

226 | ~~The “job-presets-supported” attribute provides a set of collections, where each collection~~
227 | ~~consists of a “preset-key (keyword | name(MAX))” attribute and the set of attribute names~~
228 | ~~and values, to be applied as a set by the Client when this preset is selected by the User.~~
229 | ~~The attribute names and values MUST be supported by the Printer and be listed in its~~
230 | ~~Printer Description attributes. The set of attribute values MUST NOT be in conflict with one~~
231 | ~~another as described by a constraint in “job-constraints-supported”.~~

232 | ~~A Printer MUST support the “job-presets-supported” attribute if it supports the “job-triggers-~~
233 | ~~supported” attribute.~~

234 | ~~preset-namekey (keyword | name(MAX))~~

235 | ~~The “preset-key” member attribute provides each collection in “job-presets-supported” with~~
236 | ~~a unique string identifier. Each “preset-key” MUST be unique within a “job-presets-~~
237 | ~~supported” attribute, so that each preset collection is uniquely identifiable and can be~~
238 | ~~unambiguously referenced using that “preset-key” value.~~

239 | ~~This attribute provides a unique name for the Preset. Values can be localized using the~~
240 | ~~message catalog provided at the URL specified by the “printer-strings-uri” Printer~~
241 | ~~Description attribute [PWG5100.13].~~

242 | ~~A localized string label for “preset-key” suitable for User presentation SHOULD be made~~
243 | ~~available by the Printer. A Client can acquire the localized string label by using the value of~~
244 | ~~“preset-key” as the lookup key in the strings catalog provided at the URL specified by~~
245 | ~~“printer-strings-uri” [PWG5100.13]. As a fallback, the “preset-key” value may be presented~~
246 | ~~directly; for this reason, the “preset-key” value SHOULD be descriptive.~~

247 | Examples

248 | ~~BelowHere is an example “job-presets-supported” attribute, which includes 2 collections,~~
249 | ~~described using PAPI notation [PAPI]:~~

```
250 |     job-presets-supported={  
251 |         preset-namekey="draft"  
252 |         print-quality=3  
253 |     }, {  
254 |         preset-namekey="photo"  
255 |         print-content-optimize='graphics'
```

```
256         print-quality=5
257     }
```

258 **6.1.1 job-triggers-supported (1setOf collection)**

259 This RECOMMENDED Printer Description attribute lists Triggers that are stored on the
260 Printer. Each collection value contains a REQUIRED "preset-name (keyword |
261 name(MAX))" member attribute (section) and one or more Job Template attributes that are
262 part of the Trigger.

263 **6.2 "job-triggers-supported" (1setOf collection)**

264 7 ~~The "job-triggers-supported" attribute provides a set of collections, where each~~
265 ~~collection contains a "preset-key" member attribute (section 6.1), along with a single~~
266 ~~attribute name and set of values. A Client, upon detecting that that attribute has acquired~~
267 ~~that particular value, will apply the settings in the preset in "job-presets-supported" that has~~
268 ~~the matching "preset-key" value.~~

269 8 ~~A Printer MAY support the "job-triggers-supported" attribute if it supports the "job-~~
270 ~~presets-supported" attribute.~~

271 **8.1 Examples**

272 Here is an example "job-triggers-supported" attribute, which includes 2 collections,
273 described using PAPI [notation \[PAPI\]](#):

```
274     job-triggers-supported={
275         preset-namekey="draft"
276         media-col={media-type='stationery-recycled'}
277     }, {
278         preset-namekey="photo"
279         media-col={media-type='photographic', 'photographic-
280         glossy', 'photographic-matte'}
281     }
```

282 In this example, if the user selects the 'stationery-recycled' media type, that will trigger the
283 selection of the "draft" preset from "job-presets-supported".

284 **8.2 Storing Presets and Triggers**

285 Presets and Triggers may be constructed by a User and stored locally on the Client. In
286 some cases (as described in the use case in section 3.2.3), the Client may want to store
287 those Presets and Triggers on the Printer. A Client can store a Preset or a Trigger on the
288 Printer using the Set-Printer-Attributes operation [RFC3380].

289 If a Printer supports accepting new Presets and Triggers via a Set-Printer-Attributes
290 operation, it advertises this by listing “Set-Printer-Attributes” in its “operations-supported”
291 Printer Description attribute [RFC8011], and by also listing “job-presets-supported” and
292 “job-triggers-supported” in its “printer-settable-attributes-supported” Printer Description
293 attribute [RFC3380]. 

294 **8.3 Using Resources**

295 • Talk about resource-ids member attributes in job-presets-supported collection to
296 include Job Template and other resources in the Job Ticket.

297 • Reference to IPP System Service spec

298 **9 Client Implementation Recommendations**

299 **9.1 Presets**

300 A Client should list available Presets by name in some manner in its UI presenting printing
301 choices. The Presets may come from the Printer or they may be created by the Client and
302 persisted in some way. When a User selects a Preset, the print settings in that Preset
303 should be applied. Implementors of Clients may want to consider what to do when a
304 setting has been changed by the user and then a Preset has been selected that might
305 change that setting. The Client might notify the User that the setting will be changed, or
306 alternately might apply the Preset but not change the setting changed by the User.

307 **9.2 Triggers**

308 The semantic expectation of a Trigger is “IF setting value is chosen, THEN apply Preset”.
309 Upon detecting that a Trigger's setting value has been chosen by the User, the Client
310 applies the Preset. Client implementors may want to consider cases where Triggers are
311 disabled, such as following manual selection by a user, or perhaps only allowing one
312 Trigger per “print dialog session” to be used.

313 A Trigger should only be applied in response to user input, and not in response to a value
314 being set by another Preset, a constraint, or some other automatic selection implemented
315 by the Client.

316 **10 Conformance Requirements**

317 **10.1 Conformance Requirements for Clients**

318 In order for a Client to claim conformance to this specification, a Client MUST support:

319 | 1. [The IPP Printer attributes defined in section 6:](#)

320 | **11 [Internationalization Considerations](#)**

321 | **12 [The internationalization considerations in section 13:](#)**

322 | 2. [The security considerations in section 14.](#)

323 | **12.1 [Conformance Requirements for Printers](#)**

324 | [In order for a Printer to claim conformance to this specification, a Printer MUST support:](#)

325 | 1. [The IPP Printer attributes defined in section 6:](#)

326 | 2. [The internationalization considerations in section 13:](#)

327 | 3. [The security considerations in section 14.](#)

328 | **13 [Internationalization Considerations](#)**

329 | For interoperability and basic support for multiple languages, conforming implementations
330 | MUST support the Universal Character Set (UCS) Transformation Format -- 8 bit (UTF-8)
331 | [RFC3629] encoding of Unicode [UNICODE] [ISO10646] and the Unicode Format for
332 | Network Interchange [RFC5198].

333 | Implementations of this specification SHOULD conform to the following standards on
334 | processing of human-readable Unicode text strings, see:

- 335 | • Unicode Bidirectional Algorithm [UAX9] – left-to-right, right-to-left, and vertical
- 336 | • Unicode Line Breaking Algorithm [UAX14] – character classes and wrapping
- 337 | • Unicode Normalization Forms [UAX15] – especially NFC for [RFC5198]
- 338 | • Unicode Text Segmentation [UAX29] – grapheme clusters, words, sentences
- 339 | • Unicode Identifier and Pattern Syntax [UAX31] – identifier use and normalization
- 340 | • Unicode Collation Algorithm [UTS10] – sorting
- 341 | • Unicode Locale Data Markup Language [UTS35] – locale databases

342 | Implementations of this specification are advised to also review the following informational
343 | documents on processing of human-readable Unicode text strings:

- 344 | • Unicode Character Encoding Model [UTR17] – multi-layer character model

- 345 • Unicode in XML and other Markup Languages [UTR20] – XML usage
- 346 • Unicode Character Property Model [UTR23] – character properties
- 347 • Unicode Conformance Model [UTR33] – Unicode conformance basis

348 **14 Security Considerations**

349 The IPP extensions defined in this document require the same security considerations as
 350 defined in the IPP/1.1: Model and Semantics [RFC8011] plus additional security
 351 considerations below .

352 **14.1 Human-readable Strings**

353 Implementations of this specification SHOULD conform to the following standard on
 354 processing of human-readable Unicode text strings, see:

- 355 • Unicode Security Mechanisms [UTS39] – detecting and avoiding security attacks

356 Implementations of this specification are advised to also review the following informational
 357 document on processing of human-readable Unicode text strings:

- 358 • Unicode Security FAQ [UNISECFAQ] – common Unicode security issues

359 **15 IANA and PWG Considerations**

360 **15.1 Attribute Registrations**

361 The attributes defined in this document will be published by IANA according to the
 362 procedures in IPP Model and Semantics [RFC8011] section 6.2 in the following file:

363 <http://www.iana.org/assignments/ipp-registrations>

364 The registry entries will contain the following information:

365	<u>Printer Description attributes:</u>	<u>Reference</u>
366	<u>-----</u>	<u>-----</u>
367	<u>job-presets-supported (1setOf collection)</u>	<u>[5100.PRESET]</u>
368	<u> preset-name (keyword name(MAX))</u>	<u>[5100.PRESET]</u>
369	<u>job-triggers-supported (1setOf collection)</u>	<u>[5100.PRESET]</u>
370	<u> preset-name (keyword name(MAX))</u>	<u>[5100.PRESET]</u>

447 | **17 Authors' Addresses**

448 | Primary authors ~~(using Address style)~~:

449 | Smith Kennedy
450 | 11311 Chinden Blvd.
451 | Boise, Idaho 83714
452 | smith.kennedy@hp.com

453 | The authors would also like to thank the following individuals for their contributions to this
454 | standard:

455 | Ira McDonald – High North
456 | Mike Sweet – Apple Inc.

457 **18 Change History**

458 | **18.1 August 22, 2017**

459 | Updated as per feedback from August 2017 PWG vF2F session:

- 460 | • Extensively updated structure of section 4 “IPP Presets Definitions”
- 461 | ◦ Added section 4.2 to discuss storing presets using Set-Printer-Attributes
- 462 | ◦ Added section 4.3 (placeholder) to discuss storing presets as resources
- 463 | • Added “Client Implementation Recommendations” section
- 464 | • Added “Conformance Requirements” section
- 465 | • Added “IANA and PWG Considerations” section

466 | **18.2 August 7, 2017**

467 | **18.3 ~~August 7, 2017~~**

468 | **18.4 Minor clarifications and editorial changes to section 3.**

469 | **18.5 July 28, 2017**

470 | Updated following IPP WG review and feedback:

- 471 | • Added Printing Terminology by copy / paste from RFC 8011 section 2.2
- 472 | • Incorporated Internationalization and Security Considerations content from IPP
473 | System
- 474 | • Added and fixed many references
- 475 | • Refactored section 4 according to the meeting minutes to include PAPI examples to
476 | better illustrate the structure, which is difficult to articulate using conventional IPP
477 | syntax (since there isn't a formal “data type” for “any attribute”

478 | Other additions and changes:

- 479 | • Added a new use case “Client Saving Preset Settings to Printer” to explore how that
480 | might be supported in IPP, and if that requires additional definitions.

481 **18.6 June 9, 2017**

482 Updated and refactored following May 11 IPP WG teleconference

- 483 • Expanded use case descriptions
- 484 • Refactored IPP attribute definitions

485 **18.7 April 18, 2017**

486 Initial revision.
