

The descriptor format for Device ID

The definition and usage of the *descriptor_length* and *crc* fields are specified by P1212r Draft0.1

The *descriptor_type* field shall be FF_{16}

The *reserved* field is reserved for future standardization and shall be zeroed.

The *Specifier ID* field shall be 005029_{16} .

The *Sub ID* shall be TBD.

Note: the Sub_ID field value needs to be determined from the 24 bit Sub-Identifier space of PWG RID (005029) to indicate that the information field contains the Device ID specified by IEEE Std 1284-1994.

The *information* field shall specify the Device ID. The definition of the Device ID is specified by IEEE Std 1284-1994. The most significant two bytes are the length of the sequence, including the two length bytes as specified by IEEE Std 1284-1994. If the length of the device ID is not a multiple of four, the last quadlet shall be padded with zero bytes as necessary.
